

**Is Now Part of**

**ON Semiconductor®**

**To learn more about ON Semiconductor, please visit our website at**  
**[www.onsemi.com](http://www.onsemi.com)**

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at [www.onsemi.com](http://www.onsemi.com). Please email any questions regarding the system integration to [Fairchild\\_questions@onsemi.com](mailto:Fairchild_questions@onsemi.com).

## SG6741

# Highly Integrated Green-Mode PWM Controller

### Features

- High-Voltage Startup
- Low Operating Current: 4mA
- Linearly Decreasing PWM Frequency to 22kHz
- Frequency Hopping to Reduce EMI Emission
- Peak-Current-Mode Control
- Cycle-by-Cycle Current Limiting
- Leading-Edge Blanking
- Synchronized Slope Compensation
- Gate Output Maximum Voltage Clamp: 18V
- $V_{DD}$  Over-Voltage Protection (Auto Restart)
- $V_{DD}$  Under-Voltage Lockout (UVLO)
- Internal Open-Loop Protection
- Constant Power Limit (Full AC Input Range)

### Applications

General-purpose switch-mode power supplies and flyback power converters, including:

- Power Adapters
- Open-Frame SMPS

### Description

The highly integrated SG6741 PWM controller provides several features to enhance the performance of flyback converters.

The highly integrated SG6741 series of PWM controllers provides several features to enhance the performance of flyback converters.

To minimize standby power consumption, a proprietary green-mode function provides off-time modulation to linearly decrease the switching frequency at light-load conditions. To avoid acoustic-noise problems, the minimum PWM frequency is set above 22KHz. This green-mode function enables the power supply to meet international power conservation requirements. With the internal high-voltage startup circuitry, the power loss due to bleeding resistors is also eliminated. To further reduce power consumption, SG6741 is manufactured using the BiCMOS process, which allows an operating current of only 4mA.

SG6741 integrates a frequency-hopping function that helps reduce EMI emission of a power supply with minimum line filters. Its built-in synchronized slope compensation achieves stable peak-current-mode control. The proprietary internal line compensation ensures constant output power limit over a wide range of AC input voltages, from 90V<sub>AC</sub> to 264V<sub>AC</sub>.

SG6741 provides many protection functions. In addition to cycle-by-cycle current limiting, the internal open-loop protection circuit ensures safety when an open-loop or output short-circuit failure occurs. PWM output is disabled until  $V_{DD}$  drops below the UVLO lower limit; then the controller starts again. As long as  $V_{DD}$  exceeds about 26V, the internal OVP circuit is triggered.

SG6741 is available in an 8-pin SOP package.

### Ordering Information

Part Number	Operating Temperature Range	Package	Packing Method
SG6741SZ	-40 to +105°C	8-Lead Small Outline Package (SOP)	Tape & Reel
SG6741SY	-40 to +105°C	8-Lead Small Outline Package (SOP)	Tape & Reel

## Application Diagram

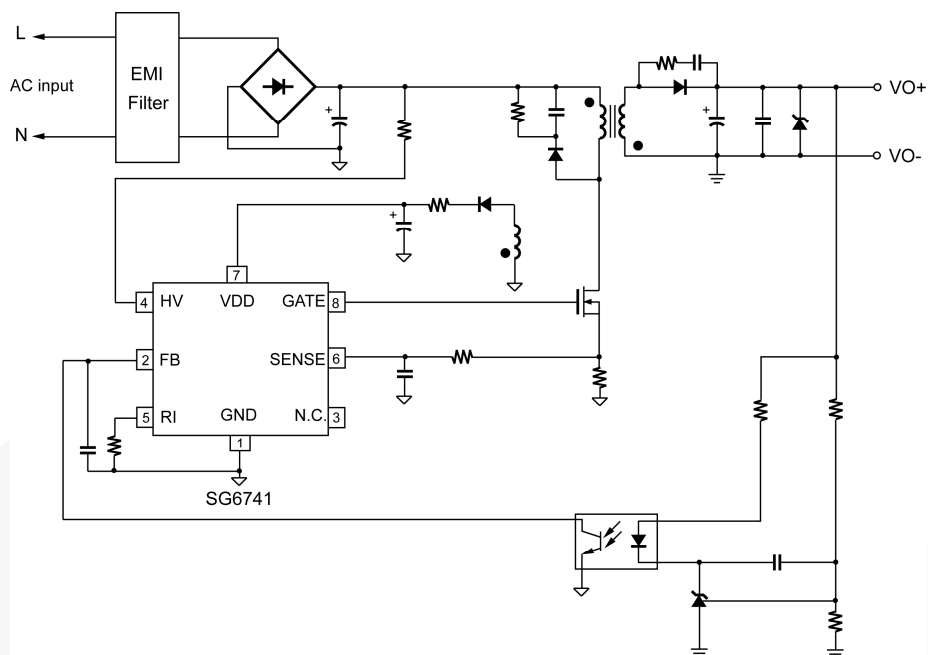

Figure 1. Typical Application

## Internal Block Diagram

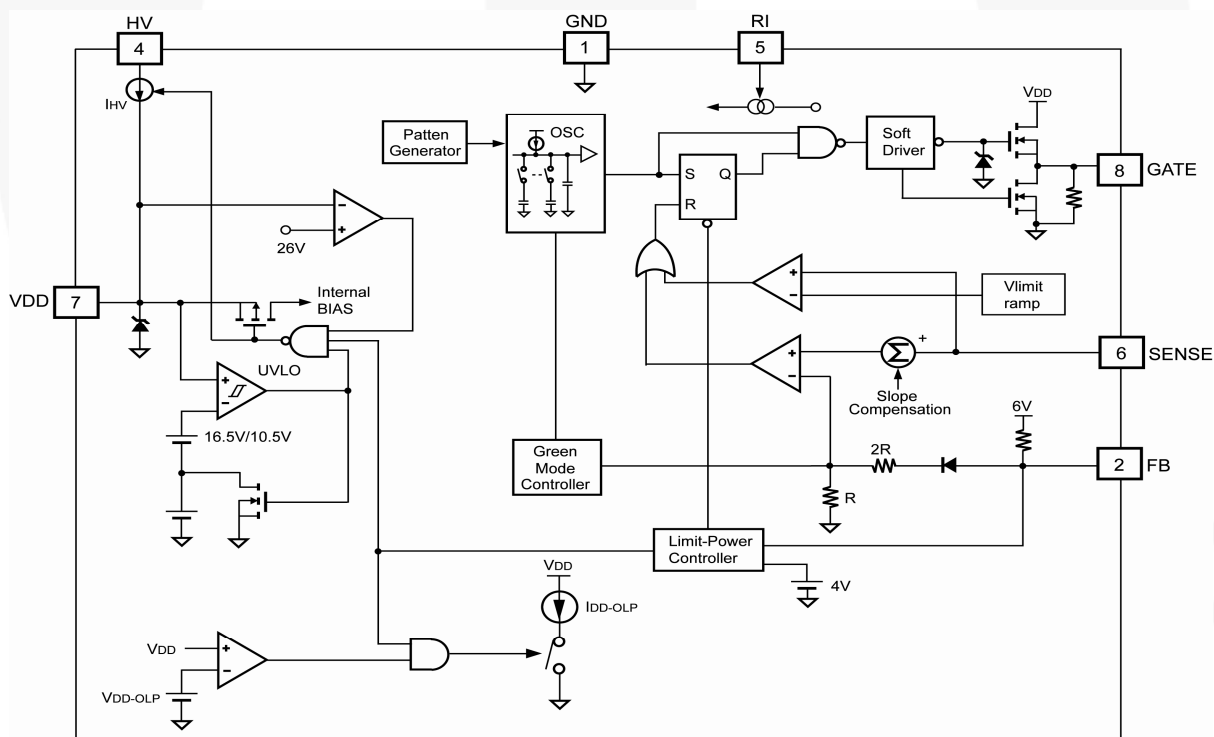

Figure 2. Functional Block Diagram

## Marking Information

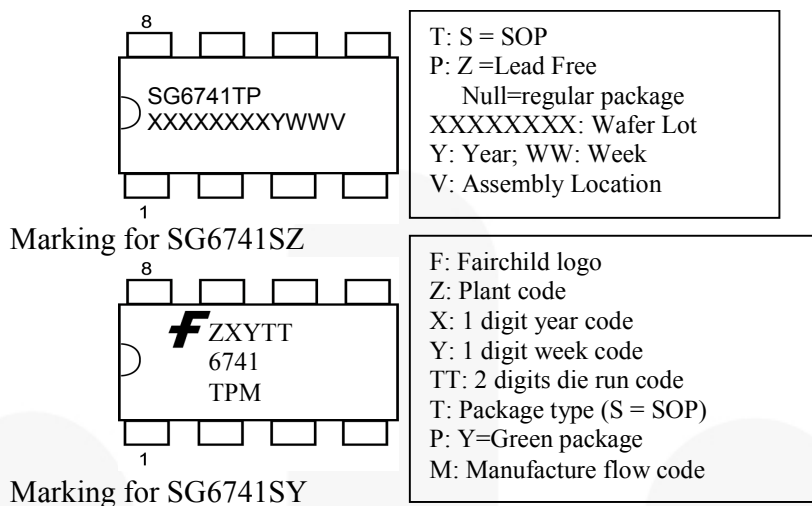

Figure 3. Top Mark

## Pin Configuration

Figure 4. Pin Configuration (Top View)

## Pin Definitions

Pin #	Name	Description
1	GND	Ground.
2	FB	The signal from the external compensation circuit is fed into this pin. The PWM duty cycle is determined in response to the signal on this pin and the current-sense signal on the SENSE pin.
3	NC	No connection.
4	HV	For startup, this pin is pulled high to the line input or bulk capacitor via resistors.
5	RI	A resistor connected from the RI pin to GND pin provides the SG6741 with a constant current source. This determines the center PWM frequency. Increasing the resistance reduces PWM frequency. Using a 26KΩ resistor (R <sub>i</sub> ) results in a 65kHz center PWM frequency.
6	SENSE	Current sense. The sensed voltage is used for peak-current-mode control and cycle-by-cycle current limiting.
7	VDD	Power supply. The internal protection circuit disables PWM output as long as V <sub>DD</sub> exceeds the OVP trigger point.
8	GATE	The totem-pole output driver. Soft driving waveform is implemented for improved EMI.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. All voltage values, except differential voltages, are given with respect to the ground pin.

Symbol	Parameter		Min.	Max.	Unit
$V_{DD}$	DC Supply Voltage <sup>(1, 2)</sup>			30	V
$V_{FB}$	FB Pin Input Voltage		-0.3	7.0	V
$V_{SENSE}$	SENSE Pin Input Voltage		-0.3	7.0	V
$V_{RI}$	RI Pin Input Voltage		-0.3	7.0	V
$V_{HV}$	HV Pin Input Voltage			500	V
$P_D$	Power Dissipation ( $T_A < 50^\circ\text{C}$ )			400	mW
$\theta_{JA}$	Thermal Resistance (Junction-to-Air)			141	$^\circ\text{C/W}$
$T_J$	Operating Junction Temperature		-40	+125	$^\circ\text{C}$
$T_{STG}$	Storage Temperature Range		-55	+150	$^\circ\text{C}$
$T_L$	Lead Temperature (Wave Soldering or IR, 10 Seconds)			+260	$^\circ\text{C}$
ESD	Electrostatic Discharge Capability, Human Body Model, JESD22-A114	All Pins Except HV Pin		4	kV
	Electrostatic Discharge Capability, Machine Model, JESD22-A115	All Pins Except HV Pin		200	V

### Notes:

1. All voltage values, except differential voltages, are given with respect to the network ground terminal.
2. Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device.

## Electrical Characteristics

$V_{DD}=15V$ ,  $T_A=25^\circ C$ , unless otherwise noted.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Units
<b>V<sub>DD</sub> Section</b>						
$V_{OP}$	Continuously Operating Voltage				22	V
$V_{DD-ON}$	Start Threshold Voltage		15.5	16.5	17.5	V
$V_{DD-OFF}$	Minimum Operating Voltage		9.5	10.5	11.5	V
$I_{DD-ST}$	Startup Current	$V_{DD-ON} - 0.16V$			30	$\mu A$
$I_{DD-OP}$	Operating Supply Current	$V_{DD}=15V$ , GATE Open		4	5	mA
$I_{DD-OLP}$	Internal Sink Current	$V_{DD-OLP} + 0.1V$	50	70	90	$\mu A$
$V_{TH-OLP}$	$I_{DD-OLP}$ off Voltage		6.5	7.5	8.0	V
$V_{DD-OVP}$	$V_{DD}$ Over-Voltage Protection		25	26	27	V
$t_{D-VDDOVP}$	$V_{DD}$ Over-Voltage Protection Debounce Time		100	180	260	$\mu s$
<b>HV Section</b>						
$I_{HV}$	Supply Current from HV Pin	$V_{AC}=90V$ ( $V_{DC}=120V$ ), $V_{DD}=10\mu F$		2.0		mA
$I_{HV-LC}$	Leakage Current After Startup	$HV=500V$ , $V_{DD}=V_{DD-OFF}+1V$		1	20	$\mu A$
<b>Oscillator Section</b>						
$f_{OSC}$	Frequency in Nominal Mode	Center Frequency	62	65	68	KHz
		Hopping Range	$\pm 3.7$	$\pm 4.2$	$\pm 4.7$	
$t_{HOP}$	Hopping Period			4.4		ms
$f_{OSC-G}$	Green-Mode Frequency		16	18	21	KHz
$f_{DV}$	Frequency Variation vs. $V_{DD}$ Deviation	$V_{DD}=11V$ to $22V$			5	%
$f_{DT}$	Frequency Variation vs. Temperature Deviation	$T_A=-40$ to $105^\circ C$			5	%
