	Class	Type
1. Class Number 2. Type Number — OR — 1. Class Number 2. Type Number of Switch Body 3. Type Number of Shaft Extension 4. Type Number of Handle Accessories 5. Type Number of Door Interlock Plate 6. Type Number of Any Desired Accessories	9421	LN1

Loadbreak Switch

VARIO™ Loadbreak Switches

VARIO™ Loadbreak Switches act as enclosure disconnects when short circuit protection is provided upstream of the switch (if short circuit protection is not provided upstream, use Class 9421 Type N, Class 9422 Type T, and D10 disconnect switches). Type V switches are UL Listed as manual motor controllers.

Ampere Size	Horsepower Ratings			Shaft Size	3 Pole Switch Body	Complete Switch▲
	240 V	480 V	600 V		Type	Type
20	5.5	10	10	6mm	V1	VCCF1
25	7.5	15	20	6mm	V2	VCCF2
45	15.5	30	40	8mm	V3	VCCF3
63	20.5	40	50	8mm	V4	VCCF4
100	25.5	50	60	8mm	V5	VCCF5
115	30.5	60	75	8mm	V6	VCCF6

▲ Complete switch includes handle operator, shaft, door interlock plate, and line terminal shroud.

Non-Metallic Enclosure

Non-Metallic Enclosures

The VARIO Loadbreak Switch is also offered as an enclosed switch, which is made of corrosion resistant material suitable for IP55 environments. The 3-pole version makes the VARIO Loadbreak Switch ideal for manual motor control applications. They are compact, easy to wire and connect, and come undrilled to allow variable cable entry positions. Note that these enclosures do not pass the UL Burn Test, which means that these versions are not UL Listed.

Ampere Size	Horsepower Ratings			IP55-PVC 3-Pole
	240V	480V	600V	Type
20	5	10	10	VC1GU
25	7.5	15	20	VC2GU
45	15	30	40	VC3GU
63	20	40	50	VC4GU
100	25	50	60	VC5GU
115	30	60	75	VC6GU

Metallic Enclosure

Metallic Enclosures

The V1 and V2 come in metallic enclosures (NEMA Type 1, 4, 4X, and 12). The NEMA Type 1 is supplied with conduit knockouts top and bottom. A VZ7 auxiliary contact can be factory installed in these metallic enclosures by adding Form X11 to the catalog number. A VZ20 auxiliary contact can be factory installed in these enclosures by adding Form X20 to the catalog number. Two VZ7 auxiliary contacts may be factory installed by adding Form X22 (2 N.O. and 2 N.C.).

Ampere Size	Horsepower Ratings			NEMA Type 1	NEMA Type 12	NEMA Type 4/4X▼
	240V	480V	600V	Type	Type	Type
20	5	10	10	V1G30	V1A30	V1W30
25	7.5	15	20	V2G30	V2A30	V2W30

▼ For indoor use only. The NEMA 4/4X enclosure is made of #304 stainless steel with 3/4 in T&B stainless steel hubs on the top and bottom.

Handle Operators

Class 9421 IEC-Style Door-Mounted Disconnect Switches (Type N)

The 9421 Type N is an IEC-style door-mounted disconnect switch with onboard fusing for Class CC and Class J fuses. The switch is UL Listed and CSA certified, and provides service entrance spacing, 100KA withstandability and Type 2 coordinated protection when used with Square D and Telemecanique starters in accordance with fuse selection tables.

Each installation will require a disconnect switch, handle, and shaft.

Class 9421 Devices

NEMA-Style Door-Mounted Disconnect Switches (D10)

A complete installation includes a D10 disconnect switch, D11 handle operator, and D12 fuse clip kit. The D10 accepts Class H, K, J, or R fuses — or can be used for non-fusible applications. The D10 disconnect switch is operated by a cast metal handle operator that is lockable in the OFF position and defeatable in the ON position. Other features of the D10 disconnect switch are:

- **High I²T rating** – This switch meets automotive and heavy-industry requirements.
- **Longer contact life** – Quick-make, quick-break, cam-trip, and spring-loaded action throws the switch into the ON position under pressure. This provides a quick-break when switching to the OFF position. The double-break contact principle also assures longer life and exceptional interrupting capacity.
- **Visible contact indication** – Clear ON and OFF markings plus actual contact positions are both visible through pole “windows.”
- **Fuse-mounting flexibility** – Fuse clips are mounted on top of the switch, providing a compact unit. Interchangeable fuse-clip kits are available for quick adaptation to other ratings.
- **Dead-front construction** – When the switch is in the OFF position, all visible current-carrying parts are de-energized, thus providing additional safety for maintenance electricians.
- **Auxiliary interlocks** – One- or two-pole interlocks can be added to the disconnect switch when required.

File E62922
CCN: DIHS2

Class 9421 Type L Circuit Breaker Mechanisms

Type L door-mounted, variable-depth operating mechanisms feature heavy duty, all metal construction with trip indication. All can be padlocked in the "OFF" position when the enclosure door is open. Further, the handle assemblies can be locked "OFF" with up to three padlocks, which also locks the door closed. (The 3" handle accepts one padlock.)

Complete Kits

Complete kits are rated for NEMA Type 1, 3R and 12 enclosures, and a door-drilling template is supplied to ease installation. They include a handle assembly, operating mechanism, and shaft assembly.

Complete Kit Does Not Include Circuit Breaker.			Includes: Operating Mechanism Standard 6" Handle Standard Shaft Kit		Includes: Operating Mechanism Standard 6" Handle Long Shaft Kit		Includes: Operating Mechanism Short 3" Handle Long Shaft Kit

▲ Single pole snap switches that contain 2 double break contact elements (1 N.O. and 1 N.C.) must be used on circuits of the same polarity. Two pole snap switches contain two electrically separated sets of contact elements allowing use on circuits of opposite polarity. Each set contains 2 double break contact elements (1 N.O. and 1 N.C.) that must be used on circuits of the same polarity.

Class 9422

Flange-Mounted, Variable-Depth, and Cable-Operated Disconnect Switches

The Class 9422 Type TCF, TCN, TDF, TDN, TEF, TEN disconnect switches were designed for control panel installations. These switches include common switch profile 30 - 100A, interchangeable fuse clips 30 - 60A, ability to add fuse clip kits and cable mechanisms. They are compatible with 9422A and 9423, and are UL recognized and CSA certified.

Dimension X is the wire bending space. It is 2.5" for 30A and 60A devices (#2 wire) and 5.12" for 100A devices (#0 wire). Refer to NEC 430-10.

Class 9422 Devices

Class 9422 Flange-Mounted, Variable-Depth Disconnect Switches

Ordering Information

The 9422 Type T disconnect switches are designed for variable depth, flange mounting applications. These switches are fully compatible with 9422 handle operators and 9423 door closing mechanisms. They feature: 200 and 400 amps; fusible (Classes H, K, J, or R fuses) and nonfusible; right or left flange mounting (except 400A, which mounts only right), UL recognized, and CSA certified. See page 28 for modifications and special features.

Disconnect Switches

* Refers to rating of switch only.

▲ 9422 R will extend maximum mounting depth 7".

† Accommodates Class J fuses only.

■ Switches are either fixed-depth or adjustable; the handle will determine installation.

▼ In steps of 0.63 inches.

● Commercially available enclosures may not accept type TG operating mechanisms. Contact enclosure manufacturer for availability of enclosures for use with these switches.

‡ Right hand flange mounting only.

Class R Fuses

Fusible disconnect switches on this page will accept Class R fuses as standard. A field installable rejection kit is available which, when installed, rejects all but Class R fuses. With the rejection kit and Class R fuses installed, the switch is UL component recognized for use on systems with up to 200,000 RMS symmetrical Amperes fault current available.

Class 9422 Handle Mechanisms

Handle mechanism kits are used with all disconnect switch and circuit breaker installations. The kits contain all parts necessary for mounting the handle to the flange of the enclosure. The Types A1 through A4 and A9 through A10 are suitable for right or left hand flange mounting. Two mounting methods are offered. The Types A5 through A8 handles are designed for right hand mounting only.

Description	Type
6" HANDLE for use with 30-200 ampere switches and all circuit breaker mechanisms For use on NEMA 1, 3, 3R, 4 (sheet steel), and 12 enclosures For use on NEMA 4 (stainless steel) enclosures <i>All external metal parts are either stainless steel or a chrome-plated non-ferrous die casting.</i>	A1 A2
4" HANDLE for use with 30-200 ampere switches and all circuit breaker mechanisms Similar to Type A1 Similar to Type A2	A3 A4
12" HANDLE for use with 400 Type TG1 and TG2 disconnect switches ONLY For fixed-depth installation in NEMA 1, 3, 3R, 4 (sheet steel), and 12 enclosures For fixed-depth installation in NEMA 4 (stainless steel) enclosures <i>All external metal parts are either stainless steel or a chrome-plated non-ferrous die casting.</i> Similar to A5 except for adjustable-depth installation Similar to A6 except for adjustable-depth installation	A5 A6 A7 A8
10" HANDLE for use with Type D2 remote or dual adaptor kit ONLY Similar to Type A1 Similar to Type A2	A9 A10

Class 9422 Mounting and Outline Dimensions for A1, A2, A3, A4, A9, and A10 Handles

All dimensions are shown for right-hand flange mounting. For left-hand flange mounting, transpose all horizontal dimensions. See page 23 for information on A5 through A8 handles.

Dimension X

Dimension X is the distance from the top inside of the enclosure or other grounded metal parts (such as conduit hubs) to the upper mounting hole of the handle mechanism (See Panel Drilling diagram). Actual distances are dependent on the disconnect device being used, and should only be determined once the disconnect device is decided upon and the location on the panel determined.

Preferred Mounting Method

This method is for 16 Ga. to 0.25" thick enclosures. It consists of mounting the handle to the outside and the stiffener bracket to the inside of the enclosure and securing with two bolts, as shown in the figure below.

Handle Dimensions

Class 9422 Devices

Panel Drilling for Alternate Mounting Method

Alternate Mounting Method

This method is for 16 Ga. to 0.25" thick enclosures. It consists of mounting the handle to the stiffener bracket with two bolts, and securing the assembly to the back side of the enclosure flange with four #10-24 screws. A separate mounting kit (Class 9422 AM-2) is required.

Class 9422 Flange-Mounted, Variable-Depth Disconnect Switches 400A Type TG

Outline dimensions and general location for 400A disconnect switches. Non-fusible and non-interchangeable fuse-clip type fusible switches.

Type A5 through A8 Handle Mechanisms

Switch Type	B	X
TG1,2	11.28 (286)	16.06 (408)

B and X = Minimum to wall or barrier to ensure adequate wire bending space to lug surface when maximum wire size is used. Refer to NEC Article 430.10. For fusible and non-fusible switches, dimension D is the distance from the outside of the flange to the disconnect switch mounting surface.

For Type TG1 or TG2
with:

- Type A5 or A6 fixed-depth handle, D = 11.38 (289).
- Type A7 or A8 adjustable-depth handle, D min. = 15.87 (403) and D max. = 19 (483), with steps of 0.63 (16).

Note that copper lugs are standard on all Type TG disconnect switches.

Non-Fusible and Fusible Switches

* D = Mounting depth measured from switch mounting surface to surface of flange

Class 9422 Bracket-Mounted Disconnect Devices

Class 9422 Type T disconnect switches listed in the table below are shipped with switch and external handle assembled to a bracket, ready for installation into the enclosure. A trim plate is provided with each kit to eliminate any mounting screws from being accessible from the front and also to provide an attractive installation. These switches can be used with Class 9423 door closing mechanisms.

▲ Space saving design – Type J fuses mounted on the non-fused bracket.

For Lug Data, see page 16; for Electrical Interlocks, see page 26.

NOTE: Some enclosures may not accept the listed operating mechanisms; contact the enclosure manufacturer.

Class 9422 Bracket-Mounted Operating Mechanisms for Use With Square D Circuit Breakers

Circuit breaker operating mechanisms listed below are shipped with the external operating handle assembled to a bracket. Circuit breakers are not included and must be ordered separately. A trim plate is provided with each kit to eliminate any mounting screws from being accessible from the front and also to provide an attractive installation. The operating handle is Type A1. These switches can be used with Class 9423 door closing mechanisms. For Class 9999 electrical interlock kits, see page 26.

Use With			Operating Mechanism
			Right Hand Flange Mounting
Breaker or Interrupter Type	No. of Poles	Frame Size (Amps)	Type

Class 9422 Devices

Remote operation shown
(handle mechanism
not included in kit)

Accessories for Class 9422 Flange-Mounted, Variable-Depth Disconnect Switches

Remote or Dual Adaptor Kit

For the remote or dual operation of 30, 60, 100 and 200 ampere disconnect switches, or GJL, FAL, FHL, KAL, KHL, LAL, LHL, Q4L, MAL, MHL, MEL, and MXL circuit breakers.

Remote Operation — permits mounting the Class 9422 Type A9 or A10 handle mechanism at a lower level than the disconnect device it controls. This arrangement is often required where the disconnect device is mounted too high for personnel to easily reach a conventional operator.

Dual Operation — permits controlling two disconnect devices, one in line with and one remote from a single Class 9422 Type A9 or A10 handle mechanism.

Note: Class 9422 Type A9 or A10 handle and preferred mounting method **must** be used.

Mounting Depths for Remote or Dual Adaptor Kits

Disconnect Device	Enclosure Mounting Depth		Type
	Minimum	Maximum	
Disconnect Switch			D2
30A Type TCN, TCF	11.37	19.25	
60A Type TDN, TDF	11.37	19.25	
100A Type TEN, TEF	11.37	19.25	
200A Type TF	13.13	20.81	
Circuit Breaker	Minimum	Maximum	
GJL	10.50	19.50	
FAL, FHL	10.66	19.50	
KAL, KHL	11.13	19.50	
LAL, LHL, Q4L	12.13	19.88	
MAL, MHL, MEL, MXL	13.75	20.25	

Note: Must mount switch or circuit breaker a minimum of 9" above or below.

Other Accessories

Alternate Mounting Kit

Channel/Flange
Support Kit

Auxiliary Lock Plate

	Description	Class	Type
Alternate Mounting Kit	Permits mounting Class 9422 Type A1 or A2 handle mechanisms in enclosures with flange thickness of 16 gauge to 0.5 inch.	9422	AM2
Channel/Flange Support Kit	Auxiliary kit recommended for use with 30 and 60 Ampere disconnect switches and FAL, FCL, FHL, KAL, and KHL circuit breaker mechanisms when these devices are to be mounted on the center channel of a multi-door enclosure or when extra rigidity for the flange is required. Supplied as standard with 100 and 200 ampere disconnect switches and LAL, LHL, Q4L, MAL, MHL, MEL, and MXL circuit breaker mechanisms	9422	C1
Auxiliary Lock Plate	Auxiliary kit recommended for use with the Class 9422 Type A-1 flange handle to facilitate padlocking the handle in the OFF position. Primarily used when the handle is mounted on the center channel of a multi-door enclosure. Also in any case where the enclosure doors interfere with the normal padlock slot in the flange handle. Meets both the Automotive and NFPA 79 specifications.	9422	L1
Special Lugs for Disconnect Switches	Copper lugs only – specify Form Y157 Tin-plated aluminum lugs for 400A Type TG switch – specify Form Y1572 (000-750 Kcmil Cu/Al wire)	—	—
	Anderson Type VCEL compression lugs – specify Form Y1574. Exceptions: all 30A and 60A disconnect switches are not available with compression lugs	—	—
Operating Rods	Standard operating rod for use with Class 9422 variable depth mechanisms. Included as standard in each kit	9422	R1
	Extra long operating rod for use with Class 9422 variable depth mechanisms. Can be used as a substitute for the standard rod included in each kit to increase the maximum mounting depth 7". (Two are required for Types ARR, RR, ART, RT, ATE, TE, ATF, TF)	9422	R2

Air valve Interlock
Mounted on Enclosure

Type G1
Air Valve Interlock

Air Valve Interlocks

Air valve interlocks are designed to interlock specific three-way air valves with Class 9422 Type A1, 2, 5, 6, 7, 8, 9, or 10 handle mechanisms when mounted to the right-hand side of an enclosure. These devices mechanically interlock the air and electrical supplies of a machine so both can be disconnected or padlocked OFF simultaneously. The air valve interlock makes it possible to exhaust the air in machine lines when the handle mechanism is moved to the OFF position, making the machine both electrically and pneumatically inoperative.

Air valve interlocks will only accept specific three-way air valves manufactured by Shrader Bellows listed in the table below. Note that the valves must be purchased directly from Shrader Bellows, 200 W. Exchange St., Akron, OH 44309-0631.

Air Valve Interlocks

Class 9422 Devices

Class 9422 Thru-the-Door Operating Mechanism Kits

Type TDKs are variable depth, thru-the-door bracket mounting kits. Standard Class 9422 variable depth operating mechanisms can be used.

Thru-the-door kits allow variable-depth, flange-mounted operating mechanisms to be mounted in enclosures which have no flange. Kits include: a two-piece, variable-depth bracket; gasket plate to maintain NEMA Type 1, 3, 3R and 12 enclosure ratings; door drilling template with locator pins; and door cutout trim and mounting hardware.

Figure 2: Gasket Plate

Class 9423 Door-Closing Mechanisms

Class 9423 Door-Closing Mechanisms

Class 9423 door-closing mechanisms may be used on enclosures with door openings up to 91 inches. The door closing mechanisms are designed to be used on control enclosures and interlocked with a Class 9422 disconnect device, although they all can be used independently. Three different systems are available and their use is as recommended below. A complete system is available for interlocking all the doors of a multi-door enclosure with the master door when using the 6" or 8" vault handle mechanism.

Note that the "Master Door" is defined to be the door of a single or multi-door enclosure which is interlocked directly with the disconnect device. The master door can be hinged on either the right or left hand side. It can be located in any position on a multi-door enclosure. The "Auxiliary Door" is defined to be the remaining door(s) of a multi-door enclosure which is (are) interlocked with the master door by means of the overhead interlocking system as illustrated on the next two pages.

NEMA-Style Flange Handle Disconnect Switch

Circuit Breaker Mechanism

Selection Procedure

- Step 1. Determine enclosure construction (number of doors, door height, hinge location, etc.).
- Step 2. Determine Class 9422 disconnect device to be used – either a disconnect switch or a circuit breaker mechanism (see examples of these devices to the left).
- Step 3. Determine the location of disconnect device and handle mechanism (right- or left-hand flange or center channel).
- Step 4. Select the door closing mechanism required:

Door Closing Mechanism		
60" Maximum Door Opening (Recommended)	46-60" Door Opening (Recommended)	61-91" Door Opening (Recommended)
 • 2 Point Locking is Standard • A Third Roller Latch Kit is Available for Three Point Locking • For 3/4" Door Depths	 • Use on Single or Multi-Door Enclosures • Use with Doors Hinged on Right or Left Side • Referred to as the 6" Vault Handle Mechanism • For 3/4" Door Depths	 • Use on Single or Multi-Door Enclosures • Use with Doors Hinged on Right or Left Side • Referred to as the 8" Vault Handle Mechanism • For 1-1/8" Door Depths

- Step 5. Select auxiliary door closing mechanisms and multi-door interlocking hardware, if required. (A complete system for interlocking all auxiliary doors of a multi-door enclosure with center channel is available for the medium and large enclosures.)

Class 9423 Door-Closing Mechanisms

Class 9423 Single Door Enclosures: NEMA Type 4 or 12 with 60" High Maximum Opening

The door closing mechanisms listed in the table below are for use on small to medium size single door control enclosures. They are designed to be used in conjunction with Class 9422 flange mounted disconnect switches and circuit breaker operating mechanisms; however, they can be used independently as well. When used on properly designed and gasketed NEMA Type 12 enclosures, they meet NFPA 79 standards.

Type M4

Latch bar not included, but most prepunched enclosures that accept Square D operating mechanisms supply a predrilled latch bar.

Description	Use On (Enclosure Type)	Use In Conjunction With	Door Latch Handle Length	Suggested Max. Door Opening	Door Depth	Type

Enclosure Construction and General Location Information

***Note:** The upper roller latch arm can be assembled to engage either the top or side flange of the enclosure. If dimension A (see Figure 1) is between $\frac{1}{4}$ and $\frac{3}{4}$ ", assemble per Figure 2. If A is more than $\frac{3}{4}$ ", assemble per Figure 2 or 3, as desired.

D30052-338C

***NOTE:** WHEN INSTALLING DOOR CLOSING MECHANISM, ASSEMBLE UPPER ROLLER LATCH PER FIGURE 2 IF A = $\frac{3}{4}$ " OR LESS AND PER FIGURE 3 IF A = MORE THAN $\frac{3}{4}$ ".

Class 9423 Door-Closing Mechanisms

Class 9423 Vault Type for Single and Multi-Door Enclosures

Single or Multi-Door Enclosures — NEMA Type 12 with 40" to 60" Door Opening

The requirements are shown in the table below:

Single-Door Enclosure		Multi-Door Enclosure		
Without Interlocking	With Interlocking	Without Interlocking	With Interlocking	
1 – M6 door closing mechanism 1 – Type M660 locking bar kit	1 – M6 door closing mechanism 1 – Type M660 locking bar kit 1 – Type M5 (use with 9422A handles)	For each door: 1 – M6 door closing mechanism 1 – Type M660 locking bar kit	For Master door: 1 – M6 door closing mechanism 1 – Type M660 locking bar kit 1 – Type M5 (use with 9422A handles)	Each Auxiliary door: 1 – M6 door closing mechanism 1 – Type M660 locking bar kit Necessary quantities of Types M2 and M7 for each door (see below)

Viewed from Inside Enclosure

- Interlocking lever extension of the flange mounted handle mechanism.
- † Actual enclosure opening – not door height.
- †† Screwdriver interlock assembly can be ordered separately. Class 9423 Type CEQ2493.

Note: All mechanisms listed on this page are suitable for either left or right hand mounting.

TYPE M6 DOOR CLOSING MECHANISM

The Class 9423 Type M6 door closing mechanism is designed to close and seal 0.75" deep doors of single or multi-door NEMA Type 12 enclosures. The Type M6 can be used on doors hinged on either the left or right hand side. Recommended door openings are from 40" – 60". Vault type handle length is 6".

TYPE M660 LOCKING BAR KITS

The lock bar kit for the Type M6 door closing mechanism contains two lock bars and is available from stock. The bars can be cut to fit door openings through 60". One lock bar kit is required for each Type M6 ordered.

TYPE M5

The Class 9423 Type M5 mechanical interlock kit is designed to interlock a Class 9422 handle mechanism with the Type M6 door closing mechanism. This kit prevents opening the master door (or single door) with the disconnect handle in the "ON" position, making it mandatory to use a screwdriver to gain entry to the enclosure, regardless of the disconnect handle position.

Required Accessories for Auxiliary Doors

TYPE M2

One Type M2 kit is required for each auxiliary door. This kit is required to interlock any auxiliary door(s) with the master door.

TYPE M7

The first auxiliary door requires 2 Type M7 kits. Additional auxiliary doors require only 1 Type M7 kit. The 0.25" diameter rod used to interconnect the M7 kits is furnished by the user. If the distance between any two Type M7 kits exceeds 36", an additional Type M7 kit should be installed to prevent the rod from buckling.

Class 9423 Vault Type For Single And Multi-Door Enclosures

Single Or Multi-Door Enclosures – NEMA Type 12 With 61" To 90" Door Openings

The requirements are shown in the table below:

Single-Door Enclosure		Multi-Door Enclosure		
Without Interlocking	With Interlocking	Without Interlocking	With Interlocking	
1 – M8 door closing mechanism 1 – Type M891 locking bar kit	1 – M8 door closing mechanism 1 – Type M891 locking bar kit 1 – Type M1 (use with 9422A handles)	For each door: 1 – M8 door closing mechanism 1 – Type M891 locking bar kit	For Master door: 1 – M8 door closing mechanism 1 – Type M891 locking bar kit 1 – Type M1 (use with 9422A handles)	Each Auxiliary door: 1 – M8 door closing mechanism 1 – Type M891 locking bar kit Necessary quantities of Types M2 and M7 for each door (see below)

Viewed from Inside Enclosure

- Interlocking lever extension of the flange mounted handle mechanism.
- † Actual enclosure opening - not door height.
- ‡ Screwdriver interlock assembly can be ordered separately. Class 9423 Type CEQ2493.

Note: All mechanisms listed on this page are suitable for either left or right hand mounting.

TYPE M8 DOOR CLOSING MECHANISM

The Class 9423 Type M8 door closing mechanism is designed to close and seal 1.125" deep doors of single or multi-door NEMA Type 12 enclosures. The Type M8 can be used on doors hinged on either the left or right hand side. Recommended door openings are from 61" – 91". Vault type handle length is 8".

TYPE M891 LOCKING BAR KITS

The lock bar kit for the Type M8 door closing mechanism contains two lock bars and is available from stock. The bars can be cut to fit door openings through 91". One lock bar kit is required for each Type M8 ordered.

TYPE M1

The Class 9423 Type M1 mechanical interlock kit is designed to interlock a Class 9422 handle mechanism with the Type M8 door closing mechanism. This kit prevents opening the master door (or single door) with the disconnect handle in the "ON" position, making it mandatory to use a screwdriver to gain entry to the enclosure, regardless of the disconnect handle position.

Required Accessories for Auxiliary Doors

TYPE M2

One Type M2 kit is required for each auxiliary door. This kit is required to interlock any auxiliary door(s) with the master door.

TYPE M7

The first auxiliary door requires 2 Type M7 kits. Additional auxiliary doors require only 1 Type M7 kit. The 0.25" diameter rod used to interconnect the M7 kits is furnished by the user. If the distance between any two Type M7 kits exceeds 36", an additional Type M7 kit should be installed to prevent the rod from buckling.

Class 9423 Door-Closing Mechanisms

Class 9423 Door Closing Mechanisms:
Single- and Multi-Door Enclosures

Enclosure Construction and General Location Information for
Types M5 and M6 and Types M1 and M8

Drilling and location information shown to the left is complete for a single door enclosure with door hinged on the left side. The top drawing shows a Type M6, M5, and Class 9422 handle mechanism; the bottom drawing shows a Type M8, M1, and Class 9422 handle mechanism.

Transpose all horizontal dimensions for doors hinged on the right side.

See the next page for information on flange and channel construction.

Dimension A

For single-door enclosures and multi-door enclosures without overhead interlocking system, minimum is 1" (25mm). For multi-door enclosures with an overhead interlocking system, minimum is 4.5" (114mm). (The overhead interlocking system consists of the required number of Class 9423 Type M2 and M7 kits for interlocking the auxiliary doors with the master door; see pages 34 and 35 for further information.)

Dimensions B and C

Type	Disconnect Devices	If A = 1", Min B =	If A = 4.5", Min B =	C
With M6, M5, and Class 9422 Handle Mechanism				
TCF, TCN	30A Disconnect Switch	3.44 (88)	2.50 (64)	3.19 (81)

Enclosure with M6, M5, and Class 9422 Handle Mechanism

Enclosure with M8, M1, and Class 9422 Handle Mechanism

Class 9423 Door Closing Mechanisms: Single- and Multi-Door Enclosures

Enclosure Construction Details for Types M5 and M6 Kits

Single- and multi-door enclosures designed to accept the Class 9423 Type M5 and/or Type M6 kits must be constructed according to the dimensions shown on this page. Imperative in the enclosure design is the door depth, which must be 0.75" (19mm) as shown in Figure 1 regardless of whether a disconnect device is used.

The figures are top views of the flange or center channels with various door configurations. Transpose all dimensions for enclosures with doors closing oppositely of those shown.

Flange Construction

Figure 1 shows flange construction. Dimension C is 3" (76mm) with a Type A5 or A7 handle on the enclosure flange. With a Class 9422 Type A1 handle mechanism on the enclosure flange, the minimum dimension for C is 1.75" (45mm); without a Class 9422 Type A1 handle mechanism on the enclosure flange, the minimum dimension for C is 0.69" (18mm).

Channel Construction

Figures 2 and 3 show the type of channel construction where two doors close on a common channel.

In Figure 2, the dimensions apply when a Type M6 kit is used on each door regardless of whether a Class 9423 Type M2 auxiliary door interlock is utilized. In this particular type of construction, the minimum dimension for E is 2" (51mm) with a Class 9423 Type M2 interlock or 1.38" (36mm) without an M2 interlock.

In Figure 3, the dimensions apply when a Class 9422 A1 handle, Class 9423 M5 kit, and Class 9423 M2 interlock are all located in the channel.

Figure 4 shows the type of channel construction where one door closes on a common channel, while another door is hinged on the common channel. For this type of channel construction, the minimum dimension for E is 2.25" (58mm) with a Class 9422 A1 handle mechanism in the channel (with or without a Class 9423 M5 kit) or 1.25" (32mm) without an A1 handle.

Additionally, the minimum for dimension D with this type of channel construction is 3.25" (83mm) with a Class 9422 A1 handle mechanism in the channel (with or without a Class 9423 M5 kit) or 2.25" (58mm) without an A1 handle.

Figure 4

Class 9423 Door Closing Mechanisms: Single- and Multi-Door Enclosures

Enclosure Construction Details for Types M1 and M8 Kits

Single- and multi-door enclosures designed to accept the Class 9423 Type M1 and/or Type M8 kits must be constructed according to the dimensions shown on this page. Imperative in the enclosure design is the door depth, which must be 1.13" (29mm) as shown in Figure 1 regardless of whether a disconnect device is used.

The figures are top views of the flange or center channels with various door configurations. Transpose all dimensions for enclosures with doors closing oppositely of those shown.

Flange Construction

Figure 1 shows flange construction. Dimension C is 3" (77mm) with a Type A5 or A7 handle on the enclosure flange. With a Class 9422 Type A1 handle mechanism on the enclosure flange, the minimum dimension for C is 3" (77mm); without a Class 9422 Type A1 handle mechanism on the enclosure flange, the minimum dimension for C is 1.5" (39mm).

Channel Construction

Figures 2 and 3 show the type of channel construction where two doors close on a common channel.

In Figure 2, the dimensions apply when a Type M8 kit is used on each regardless of whether a Class 9423 Type M2 auxiliary door interlock is utilized.

In Figure 3, the dimensions apply when a Class 9422 Type A1 handle, Class 9423 M1 kit, and a Class 9423 M2 interlock are all located on the channel. (For an alternate door closing method using a similar type of construction, refer to Class 9423 Type M25 on page 41.)

Figure 4 shows the type of channel construction where one door closes on a common channel, while another door is hinged on the common channel. For this type of channel construction, the minimum dimension for E is 3" (77mm) with a Class 9422 A1 handle mechanism in the channel (with or without a Class 9423 M1 kit) or 2" (51mm) without an A1 handle.

Additionally, the minimum for dimension D with this type of channel construction is 4" (102mm) with a Class 9422 A1 handle mechanism in the channel (with or without a Class 9423 M5 kit) or 3" (77mm) without an A1 handle.

Class 9423 Door Closing Mechanisms: Single- and Multi-Door Enclosures

Type M25 Double-Door Interlock Kit

The Class 9423 Type M25 double-door interlock kit is designed for use on enclosures with two doors closing on a center channel, and which has a Class 9422 disconnect device mounted on it. The kit provides for the interlocking of both doors to the disconnect handle with one Class 9423 Type M1 kit. It also prevents the auxiliary door from being opened before the master door is opened, and without the use of a screwdriver to void a mechanical interlock.

Installation

A complete installation of the Type M25 interlock kit requires the following items:

- (2) Class 9423 Type M8 Vault Handles
- (2) Class 9423 Type M891 Lock Bar Kits
- (1) Class 9423 Type M1 Mechanical Interlock Kit
- (1) Class 9423 Type M25 Double-Door Interlock Kit
- (1) Class 9422 Handle Mechanism
- (1) Class 9422 Disconnect Device
