

With twice the lamp life and pure bright halogen light, GlassGuard® Halogen GLS lamps are the ideal alternative to standard incandescent and compact fluorescent bulbs.

- 100% glass fragment retention
- Higher output compared to low wattage energy saver lamps
- Ideal for barn and grain storage lighting
- Contains no mercury or hazardous materials
- Fully dimmable
- Twice the lamp life than that of a standard incandescent light bulb
- Satisfies all assurance scheme requirements
- 30% power saving

Energy and Maintenance Comparison

GlassGuard® Halogen GLS

Fragment Retention Lamps

ARK1

GlassGuard® Halogen GLS

GlassGuard® Halogen GLS lamps offer a solution for grain, cereal and livestock farmers wishing to eliminate the risk of glass contamination.

The risk of an extending arm of a loading machine or other machinery reaching or hitting a light bulb could result in broken glass being spread over a wide area, causing potential contamination to grain or livestock. GlassGuard® Halogen GLS lamps eliminate these risks. In the event of accidental lamp breakage, the fragment retention coating will keep the glass contained, providing protection to grain, livestock, personnel and income.

GlassGuard® Halogen GLS lamps meet all regulatory food standards and satisfies all assurance scheme requirements within the agricultural, food processing and packaging industries.

GlassGuard® produces Europe's largest range of fragment retention lamps, providing a solution for all businesses and organisations wishing to eliminate glass contamination and injury from accidental lamp breakage.

We manufacture an extensive range of products designed to provide the highest level of protection for the food production, pharmaceutical, hotel and catering industries as well as public areas such as schools, leisure centres and hospitals.

Our high quality GlassGuard® fragment retention coating is applied to an extensive range of lamp types.
