LM85/LM96000 Evaluation Board User's Guide

References

1. LM85 or LM96000 datasheet.

The latest copy of the LM85 or LM96000 datasheet can be obtained by going to the National Semiconductor website www.national.com. Search for "LM85" or "LM96000", and then download the LM85.pdf or LM96000.pdf file.

2. SensorEval Version 1.06 or later, Evaluation Board CD containing:
 - a. The SensorEval.exe executable program used to run the LM85/LM96000 Evaluation Board.
 - b. A softcopy of this User's Guide
 - c. A readme.txt file with useful information about the program.
 - d. A softcopy of the SensorEval Software manual.

1.0 Introduction

The LM85/LM96000 Evaluation Board is used together with National Semiconductor SensorEval software (provided in the kit), and with a USB cable (not provided in the kit), and with an external personal computer (PC). Power to the LM85/LM96000 Evaluation Board is provided by the +5VDC line of the USB connection. An external power supply for fan power is required for operation of the LM85/LM96000 Evaluation Board with the 3-terminal DC fans. The third terminal of the fan is the open-collector fan tachometer (tach) output. It is recommended that the user only use 2 fans at a time to avoid overloading the USB's 5 V line. See the operational details in this user's guide.

Before connecting the PC to the LM85/LM96000 Evaluation Board through the USB cable, the PC is first turned on and allowed to go through its boot-up procedure. The user installs and initiates the SensorEval software. See Section 4.0 for details.

After the SensorEval software is running, the user can connect the USB cable first to the

computer and then to the LM85/LM96000 Evaluation Board.

The PC should be able to recognize the USB board and install the driver from the software.

The block diagram below describes the LM85/LM96000 Evaluation Board itself. The USB input provides the +5.0 VDC power to the board, which is regulated down to 3.3 VDC to power the IC's on the board. The EEPROM is programmed at the factory with a unique ID code for this particular board. When the USB cable is plugged in, the PC interrogates the USB devices and can identify this device as the LM85/LM96000 Evaluation Board.

The microcontroller on the board provides the 2-wire serial clock (SC), and serial data (SDA) signals, and relays the information from the LM85/LM96000 to the PC via the USB lines.

Appendix A provides details for each of the connectors and test points and their function.

Read this user's guide completely before using the LM85/LM96000 Evaluation Board.

1.1 Block Diagram

2.0 Quick Start

1. Install the CD into the CD drive of the computer and install the SensorEval software (see Section 4.0).
2. Hookup the USB cable between the PC or notebook computer as shown in the Quick Start Diagram in Section 2.1.
3. Run the SensorEval software by clicking on the icon on the desktop. LM85 Example: the first screen should look like this:

Select the Evaluation Board radio button. Click OK.

4. The next screen will look like this:

Select the Read Continuous (Cont) box to refresh the data continuously. Note that the

temperature readings of the 3 zones (the internal temperature of the temperature sensor device, or the temperature of one of the MMBT3904's). Notice the DC voltages on the voltage monitoring registers and pins. (See the Schematic in Section 5.2). The "12V" pin is connected to the Fan+ Voltage. This screen also shows the Fan 1 and Fan 2 tachometer readings if the fans are connected and the power is on.

5. For the user to be able to change the register settings click on the 40-41 tab. For Register 40 "START", select "Register Limits" from the pull-down menu.

2.0 Quick Start (continued)

- For direct control of the fans click on the 58-5F tab. For Registers 5C, 5D, and 5E, change the “Fan on Full Always” to “Fan Control Manually (test)” for each one.

- Select tab 2C-3F and change Registers 30, 31 and 32, the PWM Duty Cycle, to manually change the speed of each fan. Register 32 controls fans 3 and 4.

Notice that Registers 2D and 2E shows the tach RPM value for Fan 3, and Registers 2E and 2F show the value for the tach RPM value for Fan 4.

- The user may experiment with all of the combinations of the other registers, setting limits and discovering how the registers affect the performance. The entire matrix of test combinations is beyond the scope of this user's guide.

2.0 Quick Start (continued)

9. One of the features of the SensorEval software is the plotting feature. If the user clicks on the Start Plot button a graph box will appear and will graph the temperatures, Voltages, RPM, and % Duty Cycle. An example of the four plots is shown below.

10. The user can change the time interval for the data to be taken. Simply select File, then Set Read Time, and the following block will appear.

The Modify Read/Log Time dialog box allows the user to change the time interval for data collection. It includes a text input field for the time interval in seconds, with a valid range of 0.1 to 1 second. The dialog box has OK and Cancel buttons.

When the user makes the selection and clicks on OK that interval is set from that time on while the program is running.

11. If the user clicks on the Start Log button the screen shown below will appear. The user selects the directory that the datafile is to be written into and the filename. When "Open" is clicked the data is taken and logged into the datafile at whatever rate is set in the Set Read Time menu.

The Open Log File dialog box allows the user to select a directory and filename for logging data. It includes a file explorer view showing the current directory (In85) and a list of files. The dialog box has File name and Files of type fields, and Open and Cancel buttons.

2.1 Quick Start Diagram

Important! An **EXTERNAL POWER SUPPLY** is required for operation of the fans!
WARNING! Use only 2 fans at a time during the tests to avoid overloading the +5V line coming from the USB terminal. It is suggested that the user use either Fans 1 and 2, or Fans 3 and 4, during the tests. Fans may be of the 5 volt or 12 volt 3-terminal variety but the current rating of each fan must be under 200 mA.

Figure 2.1.1 Physical Layout of the LM85/LM96000 Evaluation Board

Figure 2.1.2 Wiring Diagram showing Hookup of the LM85/LM96000 Evaluation Board

3.0 Functional Description

The LM85/LM96000 Evaluation Board, along with the SensorEval Software, provides the system designer with a convenient way to learn about the operation of the LM85 or the LM96000 Temperature Sensor chip. The user simply has to install the SensorEval software on his PC, run it, connect the USB cable from the PC to the Evaluation Board, and the user can read temperatures, experiment with fan control, and set limits all according to the latest datasheet. It's that simple! The user has to provide the +5 or +12 VDC, depending on the fan's rated voltage, from an external power supply, to the Fan Power input connector of the evaluation board.

Power to the LM85/LM96000 Evaluation Board is taken from the USB 5-Volt line. This +5VDC is the input to the on-board LM2950 low dropout voltage regulator, which regulates the output voltage to +3.3 VDC. This output voltage

powers the LM85 or LM96000, the on-board microcontroller, the EEPROM chip where the board ID information is stored, and some of the fan driver circuitry. The fan tachometer outputs, all open-drain, are pulled up with resistor to the Fan Power voltage and then voltage divided down to acceptable voltage input levels for the LM85 or the LM96000 "Tach" inputs.

The external 3-terminal DC fans are either +5V or +12 VDC brushless DC fans with a rated current of 200 mA or less. Fans 1 and 2 are controlled independently. Fan 3 and 4 are driven by the same PWM3 signal from the device.

The microcontroller provides the two-wire SMBus communications to the LM85 or LM96000. For all of the details of this communication protocol see the latest LM85 or LM96000 datasheet, available at www.national.com.

3.1 LM85/LM96000 Evaluation Board Connection Table

See Appendix A for the description of all Connectors and Test Points, their function and requirements.

4.0 Software Installation and Operation

4.1 Installation

The CD provided in the LM85/LM96000 Evaluation Board Kit contains the SensorEval software used to make the LM85 or LM96000 Evaluation Board operate with the user's PC. It is assumed that the user will be using a PC with a Pentium® III or higher processor and Microsoft Windows® XP/2000/98/ME operating system.

The software is installed as follows:

1. Insert the SensorEval CD into the CD drive of the PC. See details in the readme.txt file.
2. The software manual, provided on the CD, may be useful to the user during this process.
3. The installation process will put an icon on the PC desktop so that the SensorEval program will run when the icon is double-clicked.

4.2 Operation

Follow the following procedure for operating the LM85/LM96000 Evaluation Board using the SensorEval software:

1. Run the SensorEval program by either double-clicking on the icon on the desktop or by selecting Start, Run, and browse to find the SensorEval.exe file.
2. Plug in the USB cable on both the PC and the LM85/LM96000 Evaluation Board.

Follow the register setup steps given in Section 2.0 Quick Start of this User's Guide. Make sure that you are following the given procedure for the specific evaluation board you are working with.

Refer to the electrical schematic, layout and connector diagrams for proper connections to external remote thermal diodes.

5.0 Electrical and Mechanical Specifications

5.1 Electrical Specifications

Power Requirements	
The Board uses the +5.0 VDC and GND lines from the USB connection. This +5.0 VDC voltage is regulated down to +3.3 VDC for board power.	+5.0 ± 0.1 V, 100 mA max.
Fan Power – External Power Supply set to +5 VDC or +12 VDC, whichever the fan voltage rating is. Each fan must be rated at 200 mA or less. * USE ONLY 2 FANS AT A TIME – Either Fans 1 and 2 or Fans 3 and 4. *	+5.0 ± 0.1 V, or +12.0 ± 0.1 V, at 500 mA max

The user shall use ESD precautions as specified in National Semiconductor ESD control document (SC)CSI-3-038 available through www.national.com.

APPENDIX A

LM85/LM96000 Evaluation Board Connectors and Test Points

J1 USB-B Connector

PIN #	NAME	DESCRIPTION
1	VBUS	+5 VDC on USB Bus
2	USBD-	USB Signal Input
3	USBD+	USB Signal Input
4	GND	System Ground
5, 6	Shell	Connected to ground through a 1 Meg Resistor

J2 SMBus Test Connector – 1X4 Header

PIN #	NAME	DESCRIPTION
1	+3.3V	+3.3 VDC chip supply
2	SCL	Serial Clock signal on the SMBus
3	SDA	Serial Data signal on the SMBus
4	GND	System Ground

J3 Fan Power Connector – 1X2 Header

PIN #	NAME	DESCRIPTION
1	Fan V+	+5 or +12 VDC supply as required by the fans
2	Fan V-	Return line for the Fan supply. Connected to system ground.

J4 VID Signals Test Connector – 1X5 Header

PIN #	NAME	DESCRIPTION
1	VID0	Voltage ID signal 0
2	VID1	Voltage ID signal 1
3	VID2	Voltage ID signal 2
4	VID3	Voltage ID signal 3
5	VID4	Voltage ID signal 4

J5 Fan 1 Connector – 1X3 Header

PIN #	NAME	DESCRIPTION
1	Fan 1 Tach	For 3-terminal fans – Open collector tach out – usually a yellow, green, or blue lead.
2	Fan 1 V+	+5 or +12VDC required fan voltage – red lead
3	Fan 1 GND	Fan Voltage return – black lead

J6 Voltage Monitors Test Connector – 1X4 Header

PIN #	NAME	DESCRIPTION
1	5V	Connected to the USB +5V input for chip input.
2	12V	Connected to the Fan Power V+ input for chip input.
3	2.5V	Connected to a voltage divider for chip input.
4	VCCP	Connected to a voltage divider for chip input.

APPENDIX A (Continued)
LM85/LM96000 Evaluation Board Connectors and Test Points

J7 Fan 2 Connector – 1X3 Header

PIN #	NAME	DESCRIPTION
1	Fan 2 Tach	For 3-terminal fans – Open collector tach out – usually a yellow, green, or blue lead.
2	Fan 2 V+	+5 or +12VDC required fan voltage – red lead
3	Fan 2 GND	Fan Voltage return – black lead

J8 Remote Temperature Diode Input 1 Connector – 2X2 Header

PIN #	NAME	DESCRIPTION
1	D1-	Connect to cathode of D1. Shunt 1 and 2 to connect Q3 cathode to Remote 1-.
2	Remote 1-	DUT input from remote diode cathode.
3	D1+	Connect to anode of D1. Shunt 3 and 4 to connect Q3 anode to Remote 1+.
4	Remote 1+	DUT input from remote diode anode.

J9 Fan 3 Connector – 1X3 Header

PIN #	NAME	DESCRIPTION
1	Fan 3 Tach	For 3-terminal fans – Open collector tach out – usually a yellow, green, or blue lead.
2	Fan 3 V+	+5 or +12VDC required fan voltage – red lead
3	Fan 3 GND	Fan Voltage return – black lead

J10 Remote Temperature Diode Input 2 Connector – 2X2 Header

PIN #	NAME	DESCRIPTION
1	D2-	Connect to cathode of D2. Shunt 1 and 2 to connect Q3 cathode to Remote 2-.
2	Remote 1-	DUT input from remote diode cathode.
3	D2+	Connect to anode of D2. Shunt 3 and 4 to connect Q3 anode to Remote 2+.
4	Remote 1+	DUT input from remote diode anode.

J11 Tach and PWM Test Connector – 1X4 Header

PIN #	NAME	DESCRIPTION
1	TACH1	Pulled up, and voltage-divided, Fan 1 tach output.
2	TACH2	Pulled up, and voltage-divided, Fan 2 tach output.
3	TACH3	Pulled up, and voltage-divided, Fan 3 tach output.
4	TACH4	Pulled up, and voltage-divided, Fan 4 tach output.
5	PWM1	Pulled up open-collector output of DUT to Fan 1 driver circuit.
6	PWM2	Pulled up open-collector output of DUT to Fan 2 driver circuit.
7	PWM3	Pulled up open-collector output of DUT to Fan 3 and Fan 4 driver circuit.

APPENDIX A (Continued)
LM85/LM96000 Evaluation Board Connectors and Test Points

J12 Fan 4 Connector – 1X3 Header

PIN #	NAME	DESCRIPTION
1	Fan 4 Tach	For 3-terminal fans – Open collector tach out – usually a yellow, green, or blue lead.
2	Fan 4 V+	+5 or +12VDC required fan voltage – red lead
3	Fan 4 GND	Fan Voltage return – black lead

TP1 – TP11 Ground Connector – 1X1 Header

PIN #	NAME	DESCRIPTION
1	GND	System ground.

BY USING THIS PRODUCT, YOU ARE AGREEING TO BE BOUND BY THE TERMS AND CONDITIONS OF NATIONAL SEMICONDUCTOR'S END USER LICENSE AGREEMENT. DO NOT USE THIS PRODUCT UNTIL YOU HAVE READ AND AGREED TO THE TERMS AND CONDITIONS OF THAT AGREEMENT. IF YOU DO NOT AGREE WITH THEM, CONTACT THE VENDOR WITHIN TEN (10) DAYS OF RECEIPT FOR INSTRUCTIONS ON RETURN OF THE UNUSED PRODUCT FOR A REFUND OF THE PURCHASE PRICE PAID, IF ANY.

The LM85/LM96000 Evaluation Boards are intended for product evaluation purposes only and are not intended for resale to end consumers, are not authorized for such use and are not designed for compliance with European EMC Directive 89/336/EEC, or for compliance with any other electromagnetic compatibility requirements.

National Semiconductor Corporation does not assume any responsibility for use of any circuitry or software supplied or described. No circuit patent licenses are implied.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

BANNED SUBSTANCE COMPLIANCE

National Semiconductor certifies that the products and packing materials meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.

National does not assume any responsibility for any circuitry described, no circuit patent licenses are implied and National reserves the right at any time without notice to change said circuitry and specifications.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
