1,048,576 WORD × 1 BIT DYNAMIC RAM

SILICON GATE CMOS

TC511000P/J/Z-85, TC511000P/J/Z-10 TC511000P/J/Z-12

DESCRIPTION

The TC511000P/J/Z is the new generation dynamic RAM organized 1,048,576 words by 1 bit. The TC511000P/J/Z utilizes TOSHIBA's CMOS Silicon gate process technology as well as advanced circuit techniques to provide wide operating margins, both internally and to the system user. Multiplexed address inputs permit the TC511000P/J/Z to be packaged in a standard 18 pin plastic DIP, 26/20 pin plastic SOJ and 20/19 pin plastic ZIP. The package size provides high system bit densities and is compatible with widely available automated testing and insertion equipment. System oriented features include single power supply of 5V ± 10% tolerance, direct interfacing capability with high performance logic families such as Schottky TTL. "Test Mode" function is implemented from Revision C.

FEATURES

- 1,048,576 word by 1 bit organization
- Fast access time and cycle time

		TC511000P/J/Z-85-10-12		
t_{RAC}	$\overline{RAS}$ Access Time	85 ns	100 ns	120 ns
t_{AA}	Column Address Access Time	45 ns	50 ns	60 ns
t_{CAC}	$\overline{CAS}$ Access Time	25 ns	25 ns	30 ns
t_{RC}	Cycle Time	165 ns	190 ns	220 ns
t_{PC}	Fast Page Mode Cycle Time	50 ns	55 ns	70 ns

- Single power supply of 5V ± 10% with a built-in V_{BB} generator
- Low Power
  385mW MAX. Operating (TC511000P/J/Z-85)
  330mW MAX. Operating (TC511000P/J/Z-10)
  275mW MAX. Operating (TC511000P/J/Z-12)
  5.5mW MAX. Standby
- Output unlatched at cycle end allows two-dimensional chip selection
- Common I/O capability using "EARLY WRITE" operation
- Read-Modify-Write, $\overline{CAS}$ before $\overline{RAS}$ refresh, $\overline{RAS}$-only refresh, Hidden refresh, Fast Page Mode and Test Mode capability
- All inputs and output TTL compatible
- 512 refresh cycles/8 ms
- Package Plastic DIP : TC511000P
  Plastic SOJ : TC511000J
  Plastic ZIP : TC511000Z

PIN CONNECTION (TOP VIEW)

Plastic DIP

CAPACITANCE (V_{CC} = 5V ± 10%, f = 1 MHz, Ta = 0 ~ 70°C)

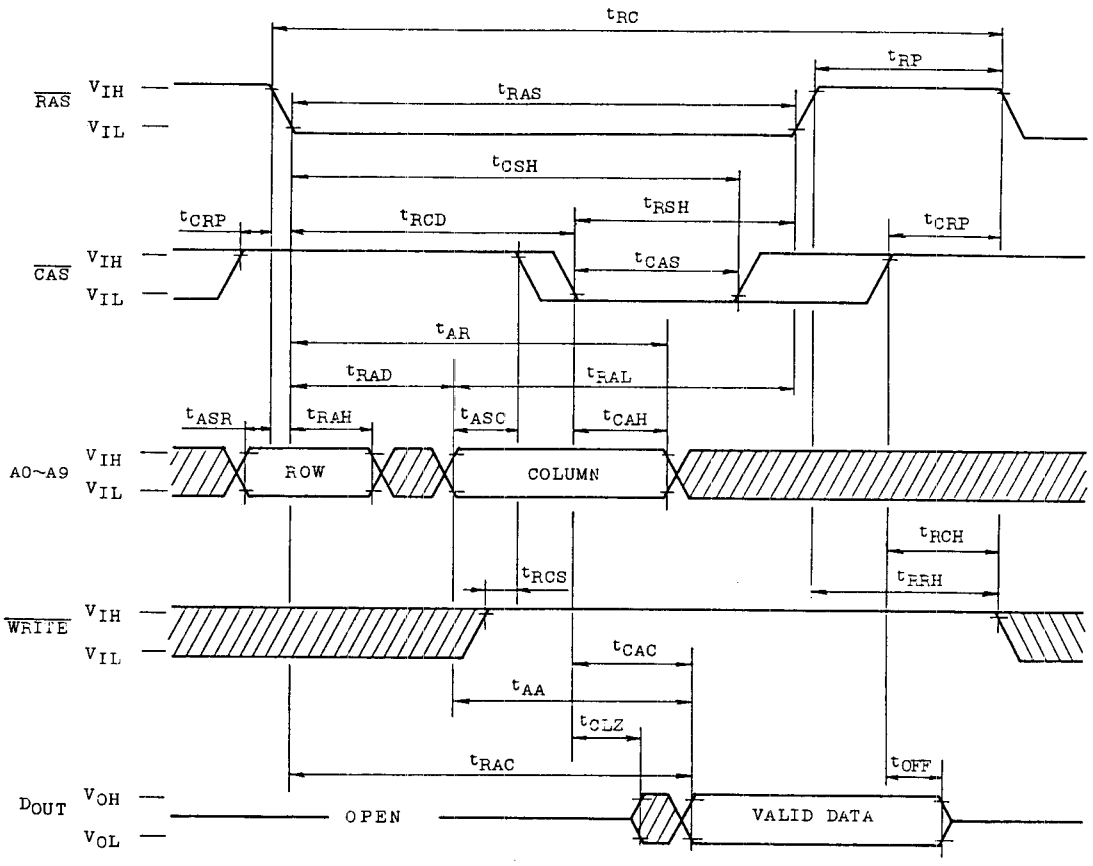
SYMBOL	PARAMETER	MIN.	MAX.	UNIT
C_{I1}	Input Capacitance (A0 ~ A9, D_{IN})	—	5	pF
C_{I2}	Input Capacitance ($\overline{RAS}$, $\overline{CAS}$, $\overline{WRITE}$, TF)	—	7	pF
C_O	Output Capacitance (D_{OUT})	—	7	pF

NOTES:

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.
2. All Voltages are referenced to Vss .
3. I_{CC1}, I_{CC3}, I_{CC4}, I_{CC6} depend on cycle rate.
4. I_{CC1}, I_{CC4} depend on output loading. Specified values are obtained with the output open.
5. An initial pause of 200μs is required after power-up followed by 8 $\overline{RAS}$ cycles before proper device operation is achieved. In case of using internal refresh counter, a minimum of 8 $\overline{CAS}$ before $\overline{RAS}$ initialization cycles instead of 8 $\overline{RAS}$ cycles are required.
6. AC measurements assume t_T= 5ns.
7. V_{IH} (min.) and V_{IL} (max.) are reference levels for measuring timing of input signals. Also, transition times are measured between V_{IH} and V_{IL} .
8. Measured with a load equivalent to 2 TTL loads and 100pF.
9. t_{OFF}(max.) defines the time at which the output achieves the open circuit condition and is not referenced to output voltage levels.
10. Either t_{RCH} or t_{RRH} must be satisfied for a read cycle.
11. These parameters are referenced to $\overline{CAS}$ leading edge in early write cycles and to $\overline{WRITE}$ leading edge in read-write cycles.
12. t_{WCS}, t_{RWD}, t_{CWD} and t_{AWD} are not restrictive operating parameters. They are included the data sheet as electrical characteristics only. If $t_{WCS} \geq t_{WCS}$(min.), the cycle is an early write cycle and data out pin will remain open circuit (high impedance) through the entire cycle; If $t_{RWD} \geq t_{RWD}$(min.), $t_{CWD} \geq t_{CWD}$(min.) and $t_{AWD} \geq t_{AWD}$(min.), the cycle is a read-write cycle and data out will contain data read from the selected cell: If neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.
13. Operation within the t_{RCD}(max.) limit insures that t_{RAC}(max.) can be met. t_{RCD}(max.) is specified as a reference point only: If t_{RCD} is greater than the specified t_{RCD}(max.) limit, then access time is controlled by t_{CAC}.
14. Operation within the t_{RAD}(max.) limit insures that t_{RAC}(max.) can be met. t_{RAD}(max.) is specified as a reference point only: If t_{RAD} is greater than the specified t_{RAD}(max.) limit, then access time is controlled by t_{AA}.

TIMING WAVEFORMS

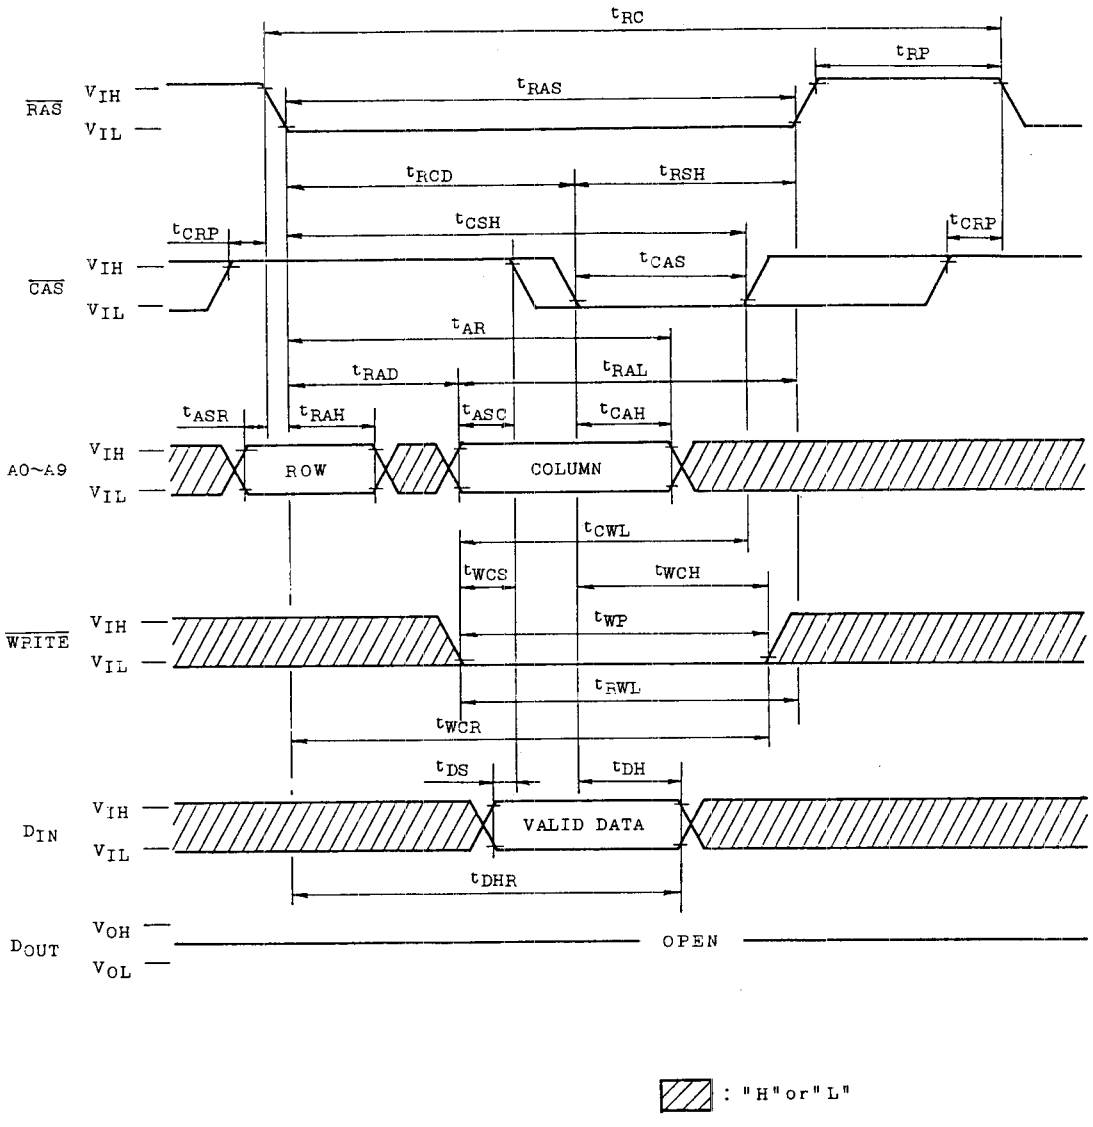
- READ CYCLE



▨ : "H" or "L"

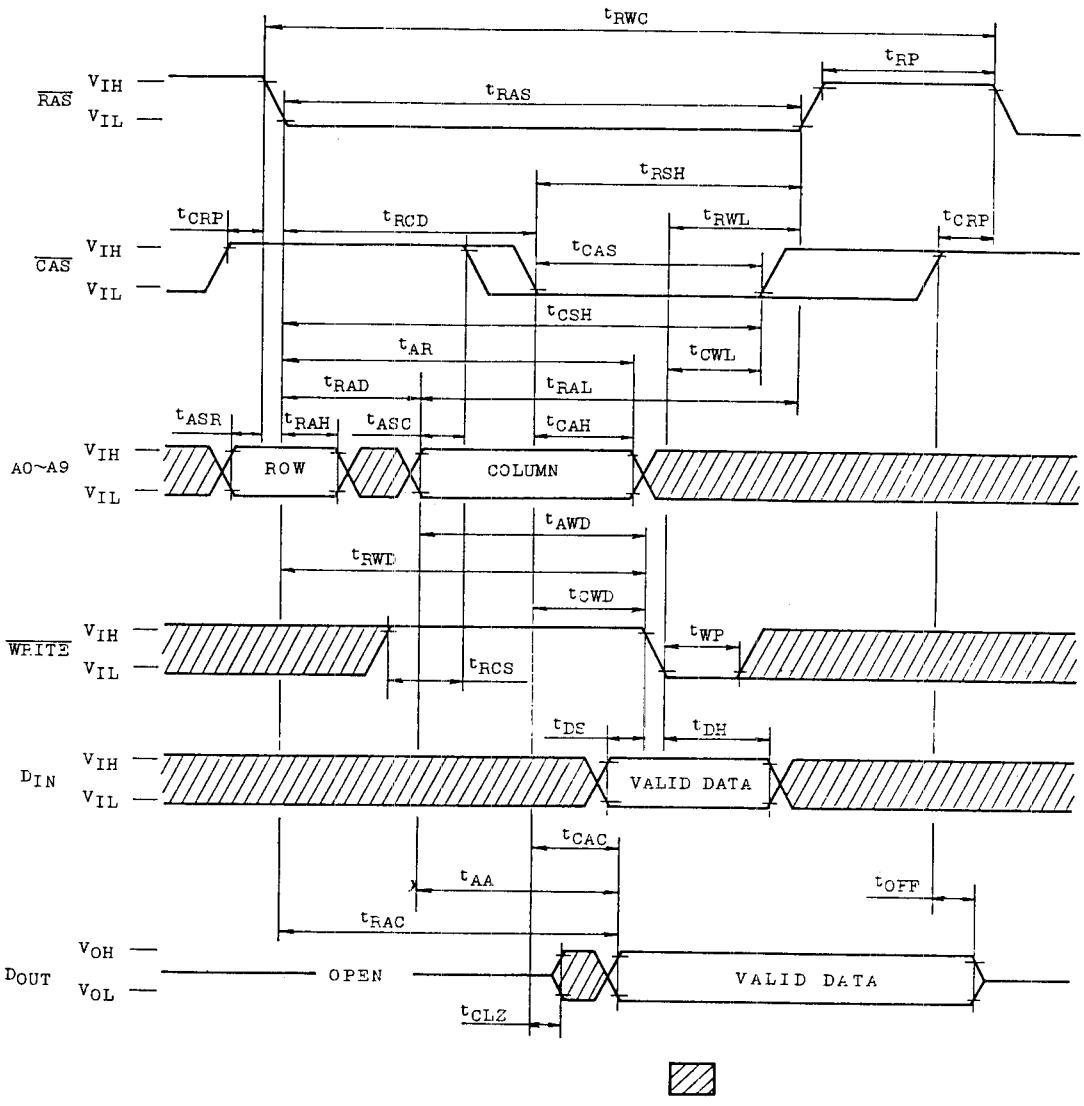
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- WRITE CYCLE (EARLY WRITE)



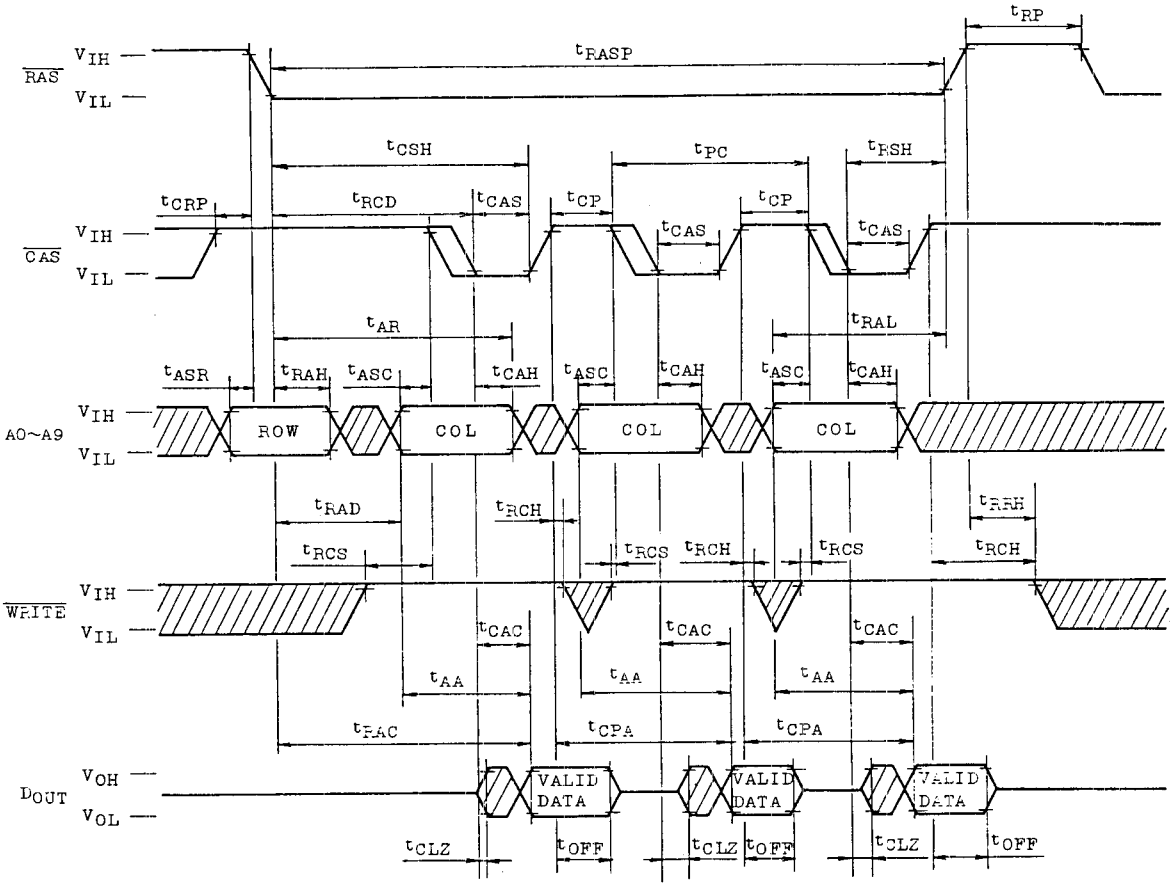
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- READ-WRITE CYCLE



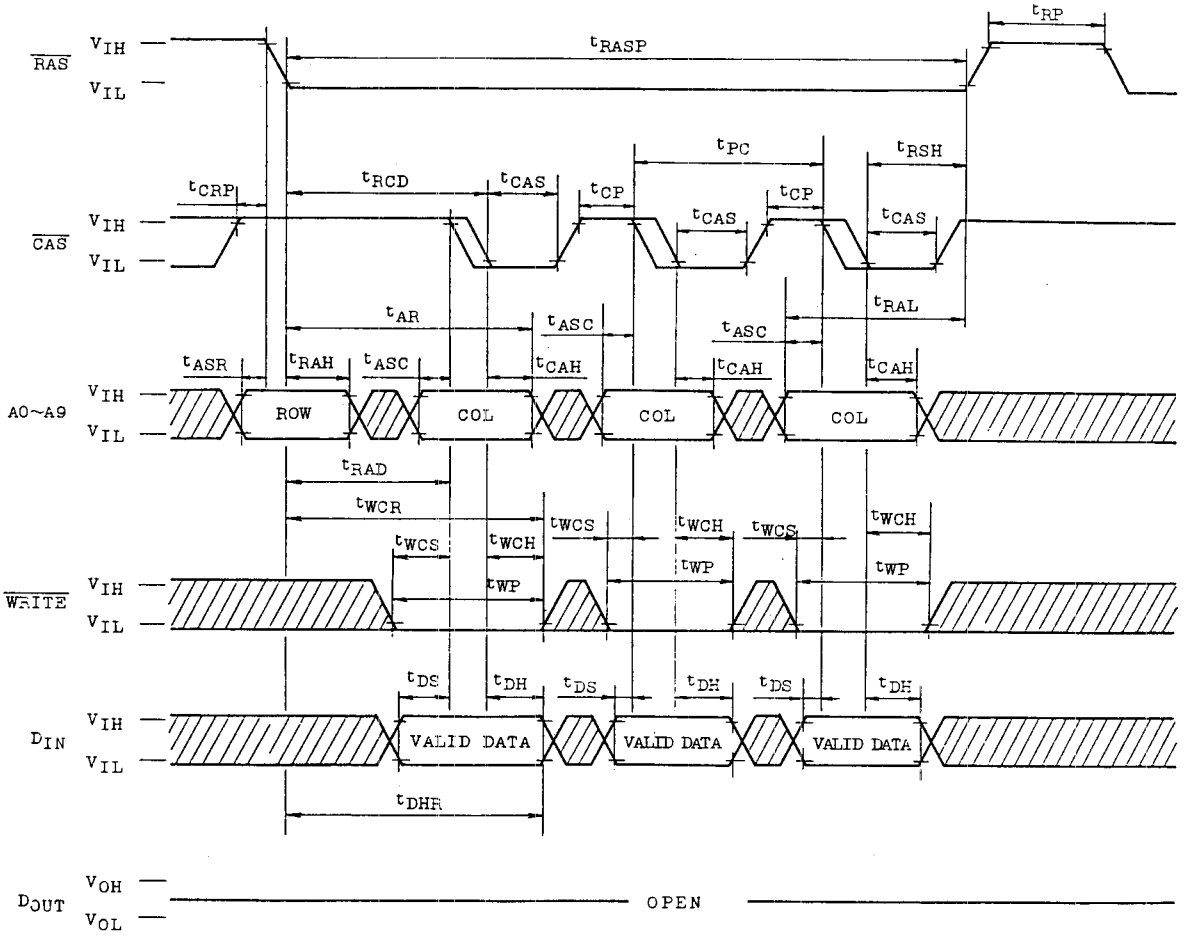
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- FAST PAGE MODE READ CYCLE



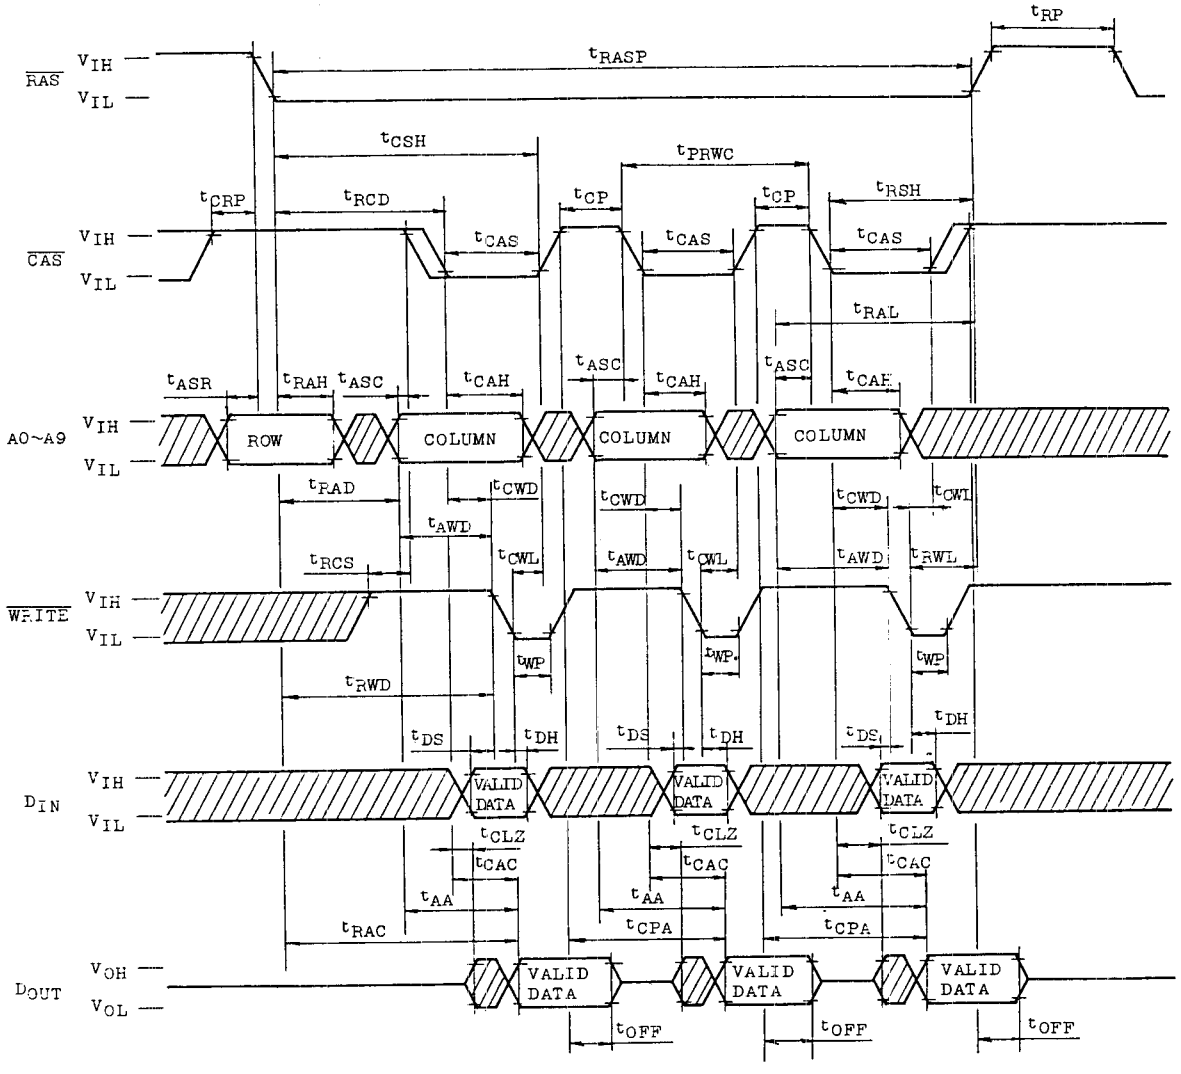
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- FAST PAGE MODE WRITE CYCLE (EARLY WRITE)



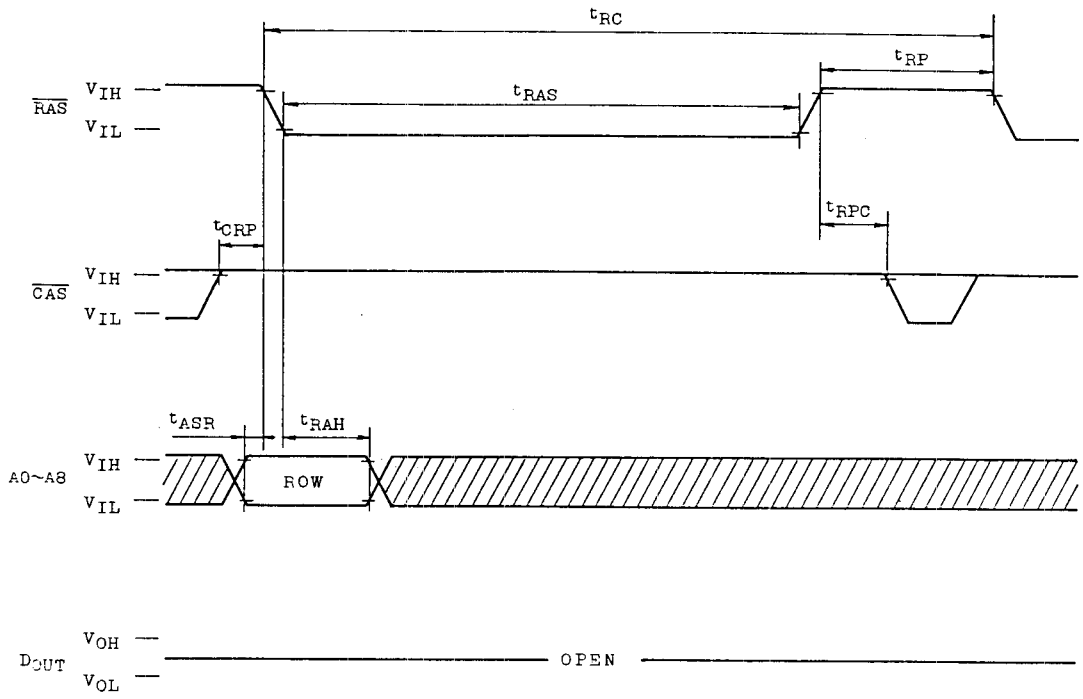
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- FAST PAGE MODE READ-WRITE CYCLE



NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- $\overline{RAS}$ ONLY REFRESH CYCLE

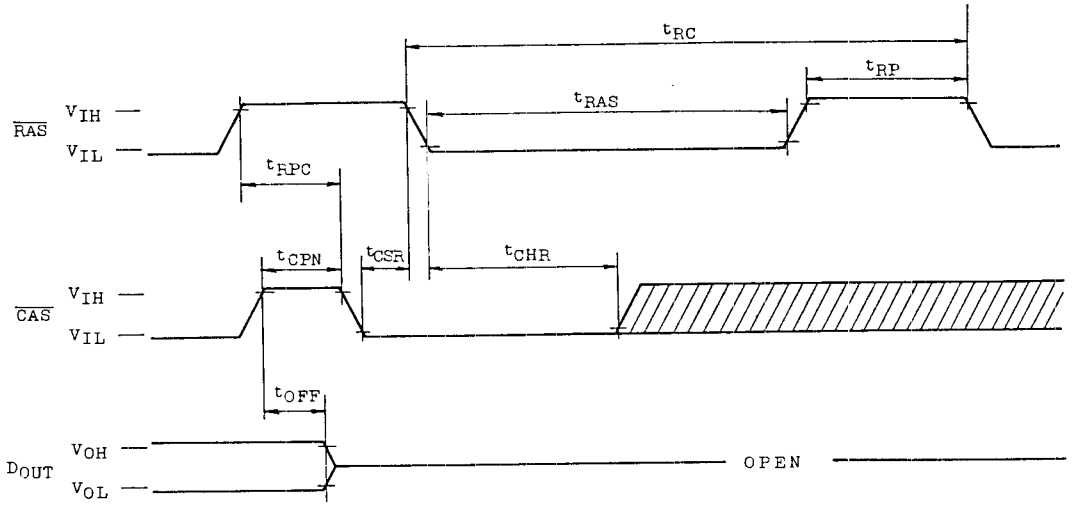


▨ : "H" or "L"

NOTE: $\overline{WRITE}$ = "H" or "L", A9 = "H" or "L"

"TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- $\overline{CAS}$ BEFORE $\overline{RAS}$ REFRESH CYCLE

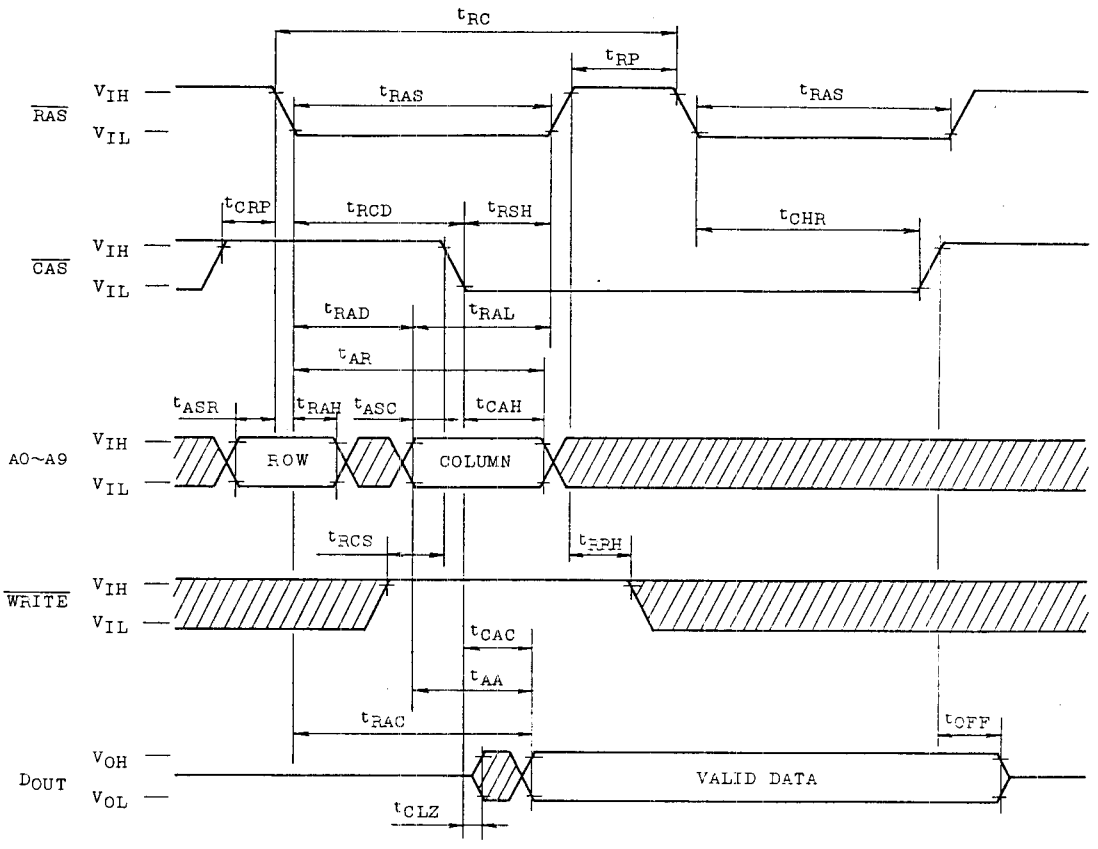


▨ : "H" or "L"

NOTE: $\overline{WRITE}$ = "H" or "L", A0 ~ A9 = "H" or "L"

"TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

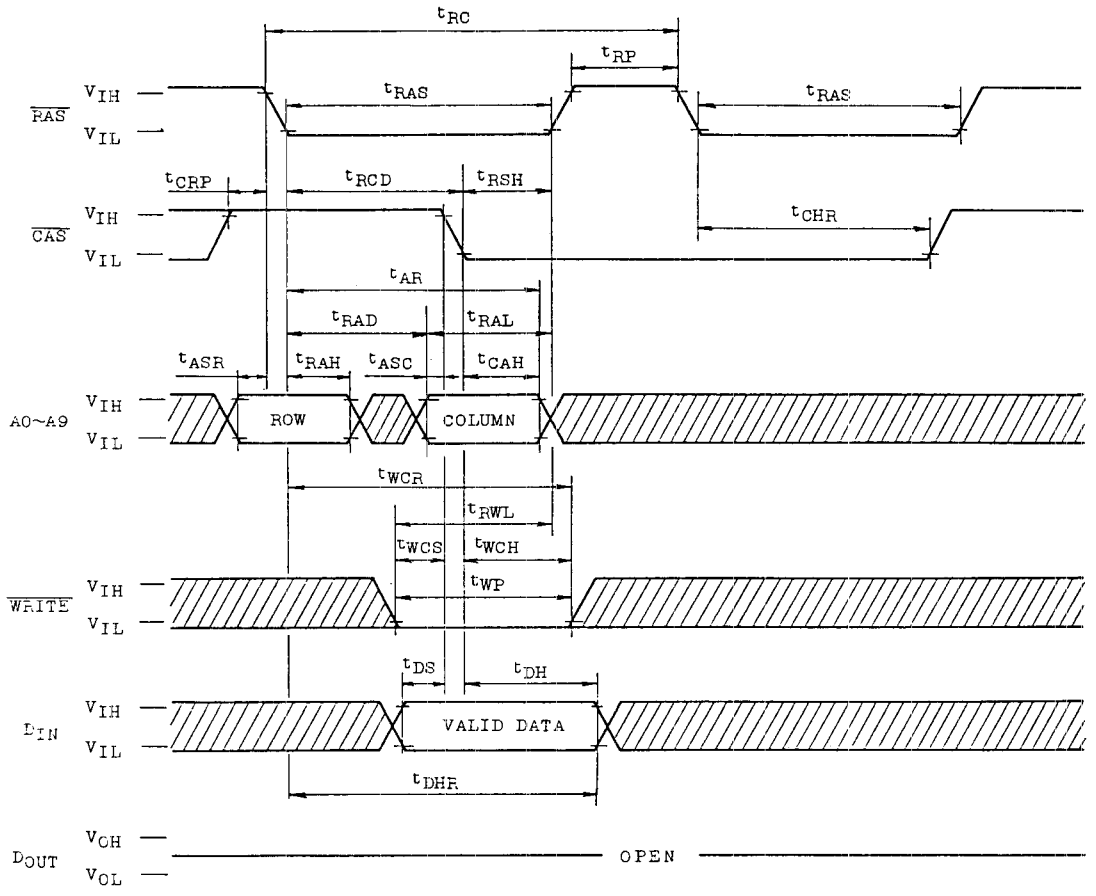
- HIDDEN REFRESH CYCLE (READ)



▨ : "H" or "L"

NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

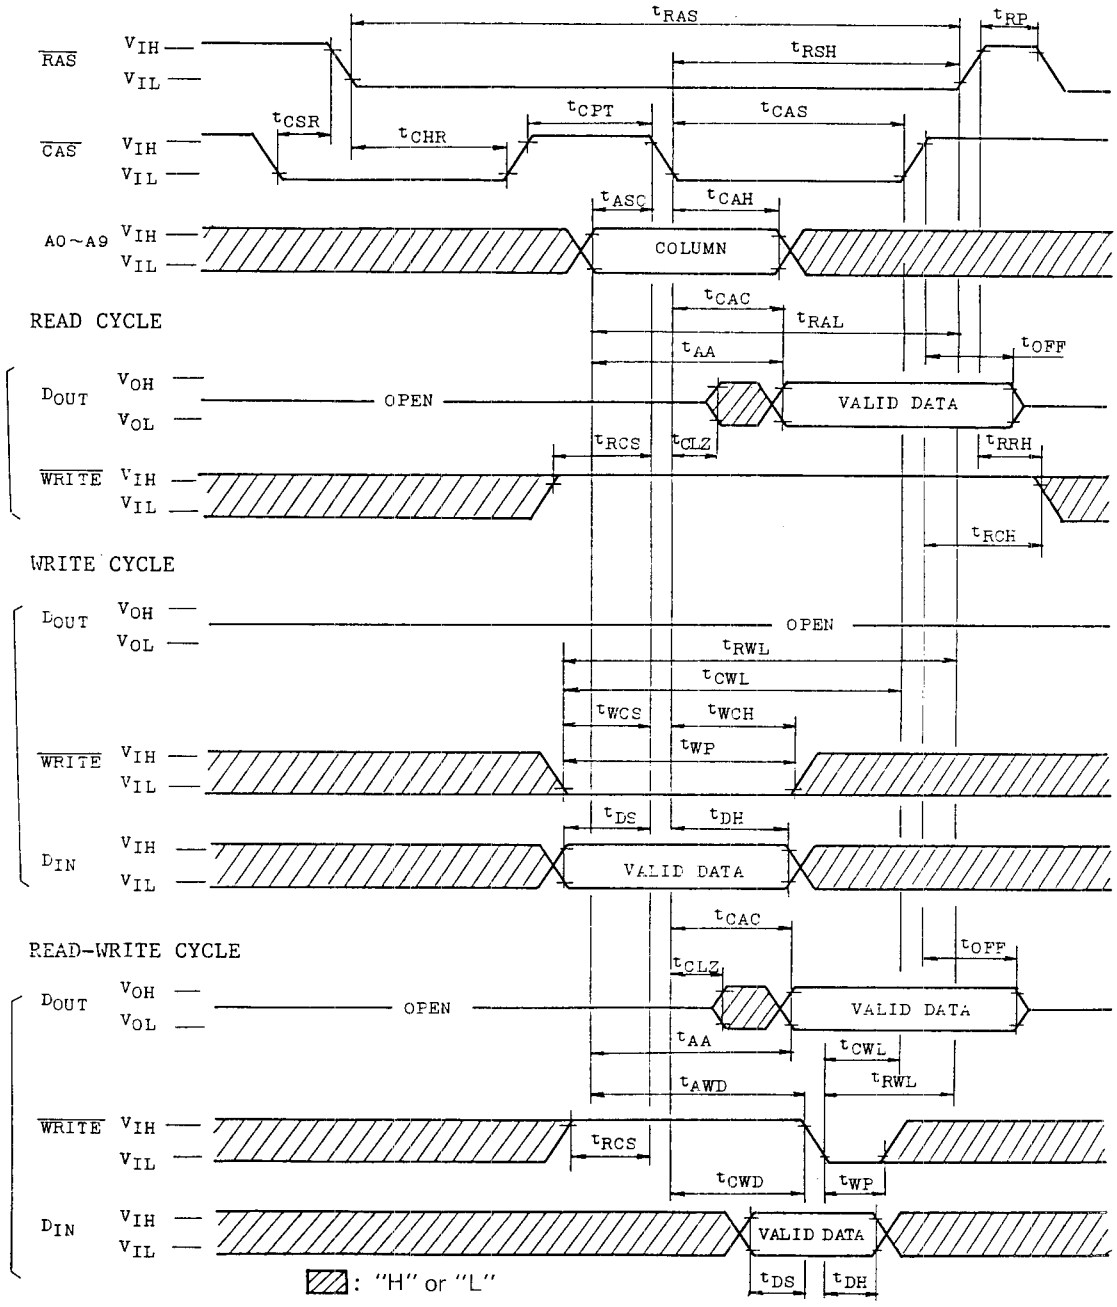
- HIDDEN REFRESH CYCLE (WRITE)



▨ : "H" or "L"

NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

- $\overline{CAS}$ BEFORE $\overline{RAS}$ REFRESH COUNTER TEST CYCLE



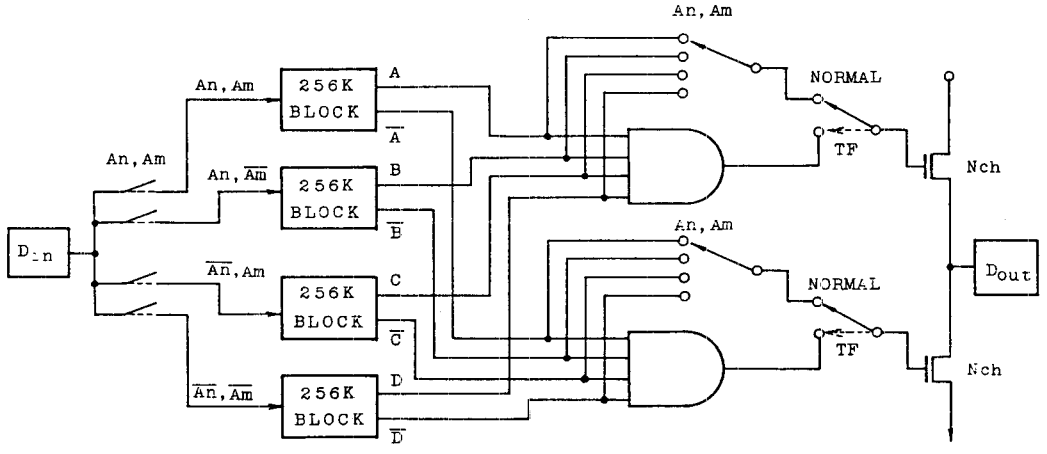
NOTE: "TF" pin should be connected to V_{IL} (TF) level or open, if "Test Mode" is not used.

TEST MODE

The TC511000P/J/Z is the RAM organized 1,048,576 words by 1 bit, it is internally organized 262,144 words by 4 bits. In "Test Mode", data would be written into a number of sectors (4 sectors) in parallel and retrieved the same way. If upon reading, all bits are equal (all "H" or "L"), the data output pin indicates a same data as all bits. In this case, the data output pin indicates an expected data for good parts, the data output pin indicates a complementary data for bad parts. And also, if any of the bits differed, the data output pin would indicate a high impedance state for bad parts. Fig. 1 shows the block diagram of TC511000P/J/Z including its truth table when "Test Mode" is used.

In test mode, 1MDRAM can be tested as if it were 256K DRAM by the following method.

Block Diagram in Test Mode



TF Pin = Super voltage; Test Mode
TF Pin = $V_{IL(TF)}$ level or High-Z; Normal

Truth Table in Test Mode Function

A	B	C	D	DOUT
0	0	0	0	0
1	1	1	1	1
otherwise				Hi-Z

Fig. 1

"Test Mode" function is performed on any of the timing cycles including fast page mode when "TF" pin is held on "super voltage (V_{CC} +4.5V (V_{CC} = 5V ± 10%), max. voltage = 10.5V)" for the specified period (t_{TES}, t_{TEHR} and t_{TEHC} ; see Fig. 2). The address input of A9 is ignored in the "Test Mode".

On the other hand, normal operation requires the "TF" pin be connected to V_{IL} (TF) level, or left unconnected on the printed wiring board.

The "Test Mode" function reduces test times (1/4; in case of using N test pattern). This "Test Mode" function is implemented from Revision "C".

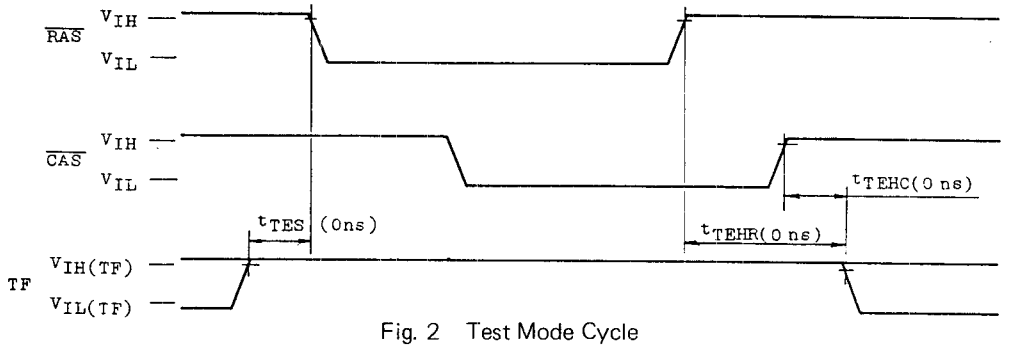


Fig. 2 Test Mode Cycle

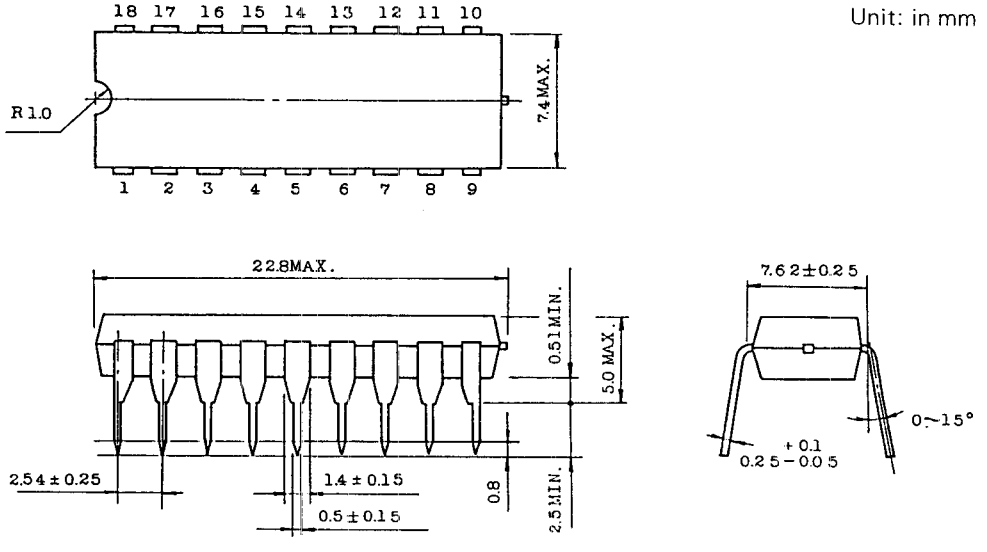
OUTLINE DRAWINGS

- Plastic DIP

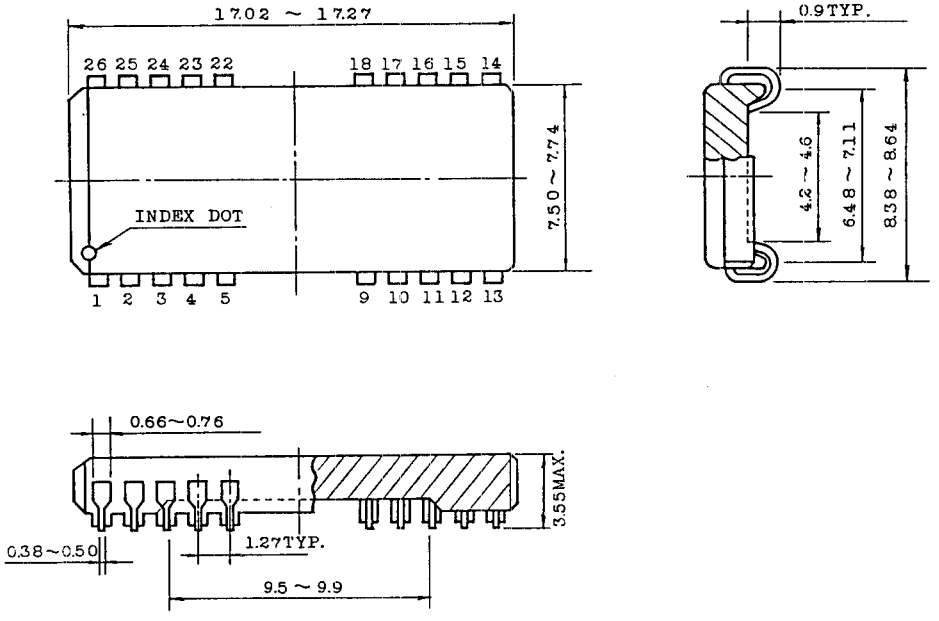
Unit: in mm



Note: Each lead pitch is 2.54mm.
All leads are located within 0.25mm of their true longitudinal position with respect to No. 1 and No. 18 leads.
All dimensions are in millimeters.

- Plastic SOJ

Unit: in mm



Note: Each lead pitch is 1.27mm.
All dimensions are in millimeters.
