CD74FCT652 **BICMOS OCTAL BUS TRANSCEIVER AND REGISTER** WITH 3-STATE OUTPUTS

SCBS734A - JULY 2000 - REVISED JULY 2000

description

Plastic (EN) DIP

The CD74FCT652 is an octal bus transceiver and resistor with 3-state outputs. It consists of D-type flip-flops and control circuitry, arranged for multiplexed transmission of data directly from the data bus or from the internal storage registers. Output-enable (OEAB and OEBA) inputs control the transceiver functions. The select-control (SAB and SBA) inputs select real-time-data or stored-data transfer. A low-input level selects real-time data, and a high-input level selects stored data. The select-control circuitry eliminates the typical decoding glitch that occurs in a multiplexer during the transition between stored data and real-time data.

The device uses a small-geometry BiCMOS technology. The output stage is a combination of bipolar and CMOS transistors that limits the output high level to two diode drops below V_{CC} . This resultant lowering of output swing (0 V to 3.7 V) reduces power-bus ringing [a source of electromagnetic interference (EMI)] and minimizes V_{CC} bounce and ground bounce and their effects during simultaneous output switching. The output configuration also enhances switching speed and is capable of sinking 64 mA.

Data on the A or B data bus, or both, can be stored in the internal D-type flip-flop by low-to-high transitions at the appropriate clock terminal (CLKAB and CLKBA), regardless of the state of the select or enable control terminals. When SAB and SBA are in the real-time-transfer mode, it also is possible to store data without using the internal D-type flip-flop by simultaneously enabling OEAB and OEBA. In this configuration, each output reinforces its input. Thus, when all other data sources to the two sets of bus lines are at high impedance, each set of bus lines remains at its last state.

To ensure the high-impedance state during power up or power down, $\overline{\sf OEBA}$ should be tied to ${\sf V}_{\sf CC}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver (B to A). OEAB should be tied to GND through a pulldown resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver (A to B).

The CD74FCT652 is characterized for operation from 0°C to 70°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

CD74FCT652 BiCMOS OCTAL BUS TRANSCEIVER AND REGISTER WITH 3-STATE OUTPUTS

SCBS734A - JULY 2000 - REVISED JULY 2000

FUNCTION TABLE

		INPU	TS			DATA I/O		OPERATION OR
OEAB	OEBA	CLKAB	CLKBA	SAB	SBA	A1–A8	B1-B8	FUNCTION
L	Н	H or L	H or L	Χ	Х	Input	Input	Isolation
L	Н	↑	1	Χ	X	Input	Input	Store A and B data
Х	Н	1	H or L	Χ	Х	Input	Unspecified [†]	Store A, hold B
Н	Н	1	1	χ‡	Χ	Input	Output	Store A in both registers
L	Х	H or L	1	Χ	Х	Unspecified†	Input	Hold A, store B
L	L	↑	1	Χ	X‡	Output	Input	Store B in both registers
L	L	Х	Х	Х	L	Output	Input	Real-time B data to A bus
L	L	Χ	H or L	Χ	Н	Output	Input	Stored B data to A bus
Н	Н	Х	Х	L	Х	Input	Output	Real-time A data to B bus
Н	Н	H or L	Χ	Н	Χ	Input	Output	Stored A data to B bus
Н	L	H or L	H or L	Н	Н	Output	Output	Stored A data to B bus and stored B data to A bus

[†] The data output functions can be enabled or disabled by various level combinations at OEAB or OEBA. Data input functions always are enabled; i.e., data at the bus terminals is stored on every low-to-high transition of the clock inputs.

[‡] When select control is low, clocks can occur simultaneously if allowances are made for propagation delays from A to B (B to A) plus setup and hold times. When select control is high, clocks must be staggered to load both registers.

SCBS734A - JULY 2000 - REVISED JULY 2000

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

DC supply voltage range, V _{CC}	0.5 V to 6 V
DC input clamp current, I_{IK} ($V_I < -0.5 \text{ V}$)	–20 mA
DC output clamp current, I_{OK} ($V_O < -0.5 \text{ V}$)	
DC output sink current per output pin, I _{OL}	70 mA
DC output source current per output pin, I _{OH}	–30 mA
Continuous current through V _{CC} , I _{CC}	140 mA
Continuous current through GND	528 mA
Package thermal impedance, θ _{JA} (see Note 1): EN package	67°C/W
M package	46°C/W
Storage temperature range, T _{stq}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

recommended operating conditions (see Note 2)

		MIN	MAX	UNIT
VCC	Supply voltage	4.75	5.25	V
VIH	High-level input voltage	2		V
VIL	Low-level input voltage		0.8	V
VI	Input voltage	0	VCC	V
VO	Output voltage	0	VCC	V
IOH	High-level output current		-15	mA
IOL	Low-level output current		64	mA
Δt/Δν	Input transition rise or fall rate	0	10	ns/V
TA	Operating free-air temperature	0	70	°C

NOTE 2: All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

electrical characteristics over recommended operating temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	vcc	T _A = 25°C	MIN MAX	UNIT
PARAMETER	TEST CONDITIONS		MIN MAX] WIIN WAA	UNIT
VIK	$I_{I} = -18 \text{ mA}$	4.75 V	-1.2	-1.2	V
Voн	I _{OH} = -15 mA	4.75 V	2.4	2.4	V
V _{OL}	$I_{OL} = 64 \text{ mA}$	4.75 V	0.55	0.55	V
lį	$V_I = V_{CC}$ or GND	5.25 V	±0.1	±1	μΑ
loz	$V_O = V_{CC}$ or GND	5.25 V	±0.5	±10	μΑ
los [‡]	$V_I = V_{CC}$ or GND, $V_O = 0$	5.25 V	-60	-60	mA
lcc	$V_I = V_{CC}$ or GND, $I_O = 0$	5.25 V	8	80	μΑ
ΔlCC§	One input at 3.4 V, Other inputs at V _{CC} or GND	5.25 V	1.6	1.6	mA
C _i	$V_I = V_{CC}$ or GND		10	10	pF
Co	$V_O = V_{CC}$ or GND		15	15	pF

[‡] Not more than one output should be tested at a time, and the duration of the test should not exceed 100 ms.

[§] This is the increase in supply current for each input at one of the specified TTL voltage levels rather than 0 V or VCC.

NOTE 1: The package thermal impedance is calculated in accordance with JESD 51.

SCBS734A - JULY 2000 - REVISED JULY 2000

timing requirements over recommended operating temperature conditions (unless otherwise noted) (see Figure 2)

			MIN	MAX	UNIT
fclock	Clock frequency			85	MHz
t _W	Pulse duration	CLK high or low	6		ns
t _{su}	Setup time	A before CLKAB↑ or B before CLKBA↑	4		ns
t _h	Hold time	A after CLKAB↑ or B after CLKBA↑	2		ns

switching characteristics over recommended operating temperature conditions (unless otherwise noted) (see Figure 2)

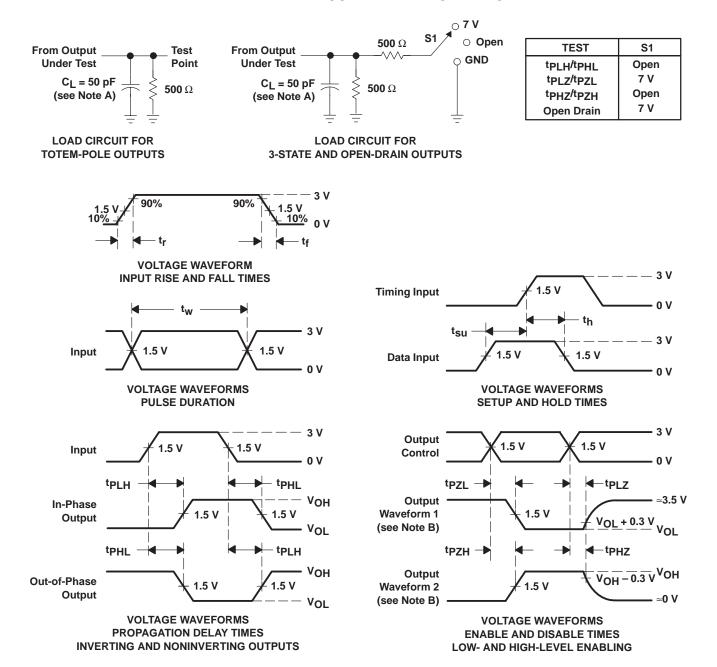

PARAMETER	FROM (INPUT)	TO (OUTPUT)	T _A = 25°C	MIN	MAX	UNIT
fmax				85		MHz
	A or B	B or A	6.8	2	9	
t _{pd}	CLKBA or CLKAB	A or B	6.8	2	9	ns
	SBA or SAB†	A or B	8.3	2	11	
t _{en}	ŌĒ	A or B	7.5	2	10	ns
^t dis	ŌĒ	A or B	7.5	2	10	ns

[†]These parameters are measured with the internal output state of the storage register opposite that of the bus input.

noise characteristics, V_{CC} = 5 V, C_L = 50 pF, T_A = 25°C

	PARAMETER	MIN	TYP	MAX	UNIT
V _{OL(P)}	Quiet output, maximum dynamic VOL		1		V
VOH(V)	Quiet output, minimum dynamic VOH		0.5		V
V _{IH} (D)	High-level dynamic input voltage	2			V
V _{IL(D)}	Low-level dynamic input voltage			0.8	V

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, $Z_O = 50 \Omega$, t_f and $t_f = 2.5$ ns.
- D. The outputs are measured one at a time with one input transition per measurement.
- E. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
- F. tpzL and tpzH are the same as ten.
- G. tpHL and tpLH are the same as tpd.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
CD74FCT652EN	OBSOLETE	PDIP	NT	24	TBD	Call TI	Call TI
CD74FCT652M	OBSOLETE	SOIC	DW	24	TBD	Call TI	Call TI

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in

a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

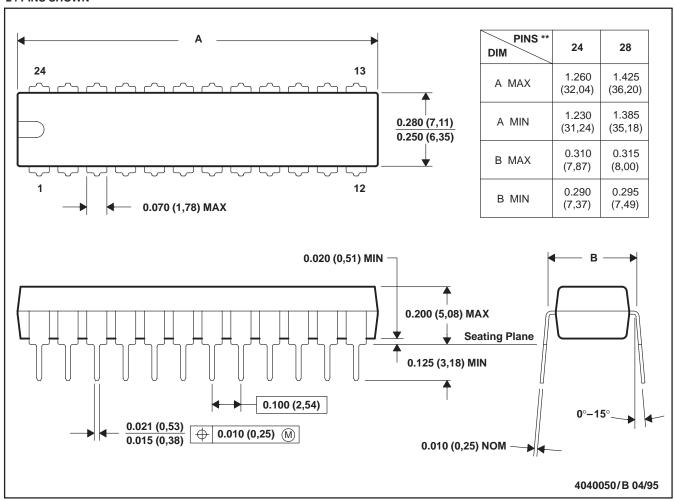

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
