

ALP/T22 SERIES

Board Mounting or Solder Tag Terminations

This range of Long Life grade capacitors features a very high CV per unit volume with low e.s.r. and impedance values and high ripple currents. They are ideally suited for use in industrial and commercial applications such as switch mode power supplies and energy storage circuits.

Capacitance range 47 μ F to 150,000 μ F

Capacitance tolerance $\pm 20\%$

Voltage range 10V to 450V d.c.

Temperature range -40°C to +85°C

Case sizes 25 x 35mm to 40 x 105mm

ALT Tag style

DD	40	55	V9
DE	40	75	V9
DF	40	105	V9

Max torque: stud M8:4NM

Terminations and Mounting

ALT styles are designed for flying lead connection.

ALP styles are designed for printed circuit board mounting to DIN 41238. For details see page 51.

For details of mounting clips and stud mounting kits see page 68/69.

TECHNICAL DATA

Related documents

DIN 41240 & 41238 & 414916-7
IEC 384-4

Temperature range

Storage -55°C to +85°C
Operating -40°C to +85°C
Environmental classification 40/085/56

Surge voltage

1000 surges (30 seconds) at 85°C with surge voltage applied. See electrical characteristics.

Charge/discharge

10⁶ cycles at 25°C and rated voltage. One cycle per second with a time constant of 0.1.

D.C. leakage current

After application of rated d.c. voltage for 5 minutes at 20°C, the d.c. leakage current shall not exceed $(0.006 C_R U_R + 4) \mu A$. Where C_R is the rated capacitance in μF and U_R is the rated d.c. voltage.

Vibration

10Hz to 500Hz at 0.75mm or 10g for 3x2hrs duration.

Insulation resistance

$\geq 100M\Omega$ at 100V d.c., across insulating sleeve.

Voltage proof

$\geq 2500V$ d.c., across insulating sleeve.

Ripple current

The following values are approximate only, to give an indication of the effects of frequency and temperature on ripple current. More accurate data can be obtained by referring to the Application Notes available from BHC Aerovox.

FREQUENCY CORRECTION

Capacitors shall withstand the rated r.m.s. ripple current as given in the tables at upper category temperature in circulating air. For frequencies other than those shown the following multipliers should be applied to the 100Hz ripple current.

RATED	FREQUENCY (Hz)				
VOLTAGE d.c.	50	100	500	1k	$\geq 10k$
0 - 25	0.89	1.0	1.05	1.06	1.07
40 - 160	0.81	1.0	1.28	1.33	1.39
200 - 450	0.75	1.0	1.54	1.70	1.89

TEMPERATURE CORRECTION

For ambient temperatures other than 85°C the following correction factors should be employed.

AMBIENT TEMPERATURE	FACTOR
30°C	2.5
50°C	2.1
70°C	1.6
85°C	1.0

N.B. The sum of the d.c. and a.c. voltage components should not exceed the d.c. voltage rating.

Life expectancy

At rated temperature with rated voltage and ripple current applied.

CAN DIAMETER (mm)	LIFE EXPECTANCY (hours)
25	12000
30	15000
35	18000
40	26000

Capacitor marking

The capacitors are marked with items 1 to 6 from the following list as a minimum, and as much of the remaining information as is practical.

1. Rated capacitance in μF
2. Rated voltage d.c.
3. Polarity of terminations
4. Tolerance on rated capacitance
5. Date code/Batch code
6. BHC part number
7. Environmental classification

Ordering information

For details of ordering see page 70.
