

PCM codec IC for digital cellular telephones

BU8731KV

The BU8731KV is a PCM codec IC developed for use with digital cellular telephones. It contains analog input / output features such as a 14-bit linear precision, μ / A-LAW codec, mic and speaker amplifiers, and switching transistor for the ringer drive. This all makes the BU8731KV perfect for PDC and CDMA-type cellular telephones.

●Applications

Digital cellular telephones

●Features

- 1) +3V single power supply ($V_{DD} = 2.7V$ to $3.3V$).
- 2) Built-in 14-bit precision linear, μ / A-LAW codec.
- 3) Transmission filter for the codec unit conforms to ITU-T recommendations.
- 4) Built-in PLL circuit for system clock generation.
- 5) Clock frequency for PCM data transmission can be set anywhere between 64kHz (128kHz when linear) to 2048kHz.
- 6) Analog input / output functions:
 - Built-in mic amplifier.
 - Built-in receiver speaker amplifier (32 Ω BTL type).
 - Built-in earphone speaker amplifier (32 Ω single type).
- 7) DTMF signal and scale tone signal generator functions are built into the tone signal generator block.
- 8) Internal switching transistor for ringer drive.
- 9) VQFP 48-pin package.
- Built-in drive amplifier for reception REXT (600 Ω).
- Built-in electronic volume control for gain adjustment (for reception, transmission, and tone).
- Data signal I / O circuit allows for connection to external devices.
- For the REXT output and earphone output, soft-mute function reduces pop noise when the power is turned on and off.

*1 The power supply voltage (DV_{DD}, RXV_{DD}, and TXV_{DD}) is 3V. There is no load on the digital and analog output pins.

Digital input pins other than the FSYNC and CLK pins are connected to DV_{DD} or DV_{SS}.

Analog input pins are connected to TXREF or RXREF with the proper resistance.

With soft mute off (SMUTE=0).
