1. Capacitance, ESR and Leakage current are all measured according to IEC 62391-1 at +20 °C

2. 15 °C Temperature Rise

3. Peak Current is for 1 second = $\frac{1}{2}$ Working Voltage x Capacitance / (1 + ESR x Capacitance)

4. Leakage current measured after 72 hours, +20 °C

5. Max. Power = Working Voltage² / 4 / ESR

6. Stored energy = $\frac{1}{2}$ Capacitance x Working Voltage² / 3600

Manual solder

+350 °C, 4-5 seconds. (by soldering iron), generally manual, hand soldering is not recommended.

Reflow soldering

Do not use reflow soldering using infrared or convection oven heating methods.

Cleaning/Washing

Avoid cleaning of circuit boards, however if the circuit board must be cleaned use static or ultrasonic immersion in a standard circuit board cleaning fluid for no more than 5 minutes and a maximum temperature of +60 °C. Afterwards thoroughly rinse and dry the circuit boards. In general, treat supercapacitors in the same manner you would an aluminum electrolytic capacitor.
