TYPICAL SIZE COMPARISON

Typically half the size of conventional resistors! Type 202 is world's smallest wirewound resistor! Series 200 resistors offer the same MIL-grade construction as Series 100 resistors except utilize proprietary materials and processing, enabling significant size reductions. Series 200 resistors are ideal when PCB real estate is at a premium! Highest grade materials enable excellent stability and environmental performance.

DERATING: Power resistors reach elevated temperatures when operated near full wattage, and therefore should be mounted off the PCB and derated according to required stability levels.

¹ Volt rating determined by $E = \sqrt{PR}$, E not to exceed max. rating. Increased ratings available. Multiply by 0.7 for Opt. X

² Allow .032" additional for Option X and values below 1.0 Ω

³ Lead length applies to bulk packaged parts units, parts supplied on tape may be shorter (refer to taping specification)
